

KEY HIGHLIGHTS

- Installed capacity reached 26.8 GW, of which 74% from renewable sources, reflecting 726 MW of wind capacity added over the last 12 months. **As of end of Sep-20, we had 1.9 GW of wind and solar projects under construction.** Our coal capacity will soon be reduced, as in July 2020 we announced the anticipated closure of 2 coal plants in Iberia (Sines e Soto 3, with 1.5 GW) in early 2021.
- Electricity generation was predominantly derived from renewable sources: 74% of total**, with hydro generation in line with historical average and wind generation 9% below expected volumes. The 21% YoY increase of coal generation in Iberia in the 3Q20 was driven by the forced coal stocks burning ahead of the earlier closure of two coal plants in Iberia.
- Electricity distributed in Portugal was broadly stable in 3Q20 (-0.4% YoY)** reflecting a clear recovery from the Covid-19 lockdown period (-11% YoY in 2Q20) and contributing for a 4% YoY decline in 9M20. In **Spain**, electricity distributed in our region (-12% YoY in the 9M20) was also penalised by a decline in industrial activity. This compares with a 6% decline demand in Spain as a whole in 9M20 (-3% YoY in 3Q20 vs. -13% in 2Q20). In **Brazil**, distributed volume declined 7% in the 9M20 YoY, with a 3.5% YoY decline in the 3Q20.
- In the supply business in Iberia, electricity sold **declined 4% in Portugal and 12% in Spain**, mostly reflecting the impacts of the pandemic, while the volume of **gas supplied increased 4% in Iberia** due to new large clients in our portfolio.
