Main highlights for the period

Key Operational Data	2021	2020	Δ %	Δ Abs.
Installed capacity (MW)	24 651	23 680	4%	971
Weight of Renewables (1)	80%	79%	-	1p.p.
Production (GWh)	60 929	64 318	-5%	-3 389
Weight of Renewables (1)	75%	74%	-	1p.p.
Scope 1 & 2 Emissions Intensity (gCO2/kWh)	176	146	21%	+30
Customers supplied (thousand of contracts)	9 308	9 312	-0%	-4
Customers connected (thous.)	11 427	11 274	1%	+153

Reported net profit in 2021 was €657m, a 18% decrease YoY, penalized by non-recurring effects of €169m, including impairments of thermal assets in Iberia. Excluding these impacts, recurring net profit increased 6% YoY to €826m, supported by the strong performance in renewables globally, the integration of Viesgo in Spain and the growth of activity of networks in Brazil. On the other hand, EDP's performance in 2021 was penalized by the increase in energy prices in the wholesale market, and hydro resources below average in Iberia.

Gross investments amounted to €3.9 bn in 2021, of which 95% dedicated to renewables and electricity networks. In 2021, EDP has installed +2.6 GW of wind and solar capacity and renewables represented 75% of EDP's electricity generation.

Income Statement (€ million)	2021	2020	Δ %	Δ Abs.
Gross Profit	4 835	5 092	-5%	-257
OPEX	1 555	1 524	2%	+32
Other operating costs (net)	(335)	(379)	11%	+43
Operating costs	1 220	1 145	7%	+75
Joint Ventures and Associates (2)	108	3	-	+105
EBITDA	3 723	3 950	-6%	-227
EBIT	1 931	2 206	-12%	-275
Financial Results	(511)	(671)	24%	+160
Income taxes & CESE (3)	315	374	-16%	-59
Non-controlling Interest	448	361	24%	+87
Net Profit (EDP Equity holders)	657	801	-18%	-144

Recurring EBITDA increase 7% to €3,735m in 2021, including Forex negative impact of 2% YoY, mostly on the back of an 8% BRL depreciation against the Euro.

Recurring EBITDA in Renewables increased by 4% to €2,295m, reflecting the increase in average MW capacity (+9% YoY), higher asset rotation gains, which more than offset the negative impact from the wind and hydro resources below average and Polar Vortex in USA in Feb-21

Recurring EBITDA in the Electricity Networks segment had a strong growth of +51% to €1,340m. In Spain, the integration of Viesgo more than doubled the size of our operations and the integration process is evolved ahead of initial schedule. In Portugal, the digitalization of the distribution network advanced in 2021, with 0.8m smart meters installed, reaching 4.0m or 63% of total network. In Brazil, the 58% EBITDA growth was supported on the execution of the transmission investment plan and the closing of the first asset rotation transaction while in distribution, the investment increased 35% and the regulated revenues increased 19%, positively impacted by the recovery of demand (+7%) and by the annual inflation updates.

Key Performance indicators (€ million)	2021	2020	Δ %	Δ Abs.
Recurring EBITDA (4)	3 735	3 504	7%	+231
Renewables	2 295	2 209	4%	+87
Networks	1 340	889	51%	+451
Clients solutions & EM	119	446	-73%	-328
Other	(19)	(40)	53%	+21
Recurring net profit (4)	826	780	6%	+46

The client solutions and energy management segment recurring EBITDA presented a 73% decrease YoY, penalized by the strong increase in wholesale energy prices, with significant impact on sourcing and energy production costs, as well as negative mark-to-market impact on gas financial hedging contracts.

Net debt in Dec-21 stood at €11.6 bn, -6% YoY, the lower debt level of the last 14 years, reflecting the €1.5bn capital increase by EDPR and the €2bn green hybrid bond issues in 2021, and the acceleration of our investments in renewables and electricity networks.

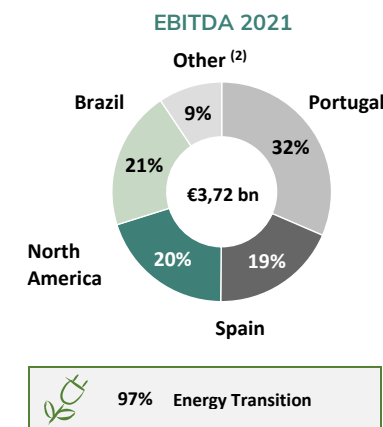

Key Financial data (€ million)	Dec-21	Dec-20	Δ %	Δ Abs.
Net debt	11 565	12 243	-6%	-678
Net debt/EBITDA (x) (5)	3,5x	3,5x	-1%	0,0x
FFO / Net Debt	21%	19%	8%	2p.p.

The Executive Board of Directors will propose to the General Shareholders' Meeting, the distribution of a **dividend for the year 2021 in the amount of €0.19 per share, in line with the previous year**, fully aligned with the dividend policy established in our 2021-2025 strategic plan.

(1) Including Wind, Solar, Hydro and mini-hydro capacity; (2) Full details on page 27; (3) CESE: Extraordinary contribution from the energy sector; (4) Excluding one-off impacts as per page 3 (EBITDA) and page 4 (Net profit); (5) Net of regulatory receivables; net debt excluding 50% of hybrid bond issues (including interest); Based on trailing 12 months recurring EBITDA and net debt excluding 50% of hybrid bond issue (including interest); Includes operating leases (IFRS-16)

- Adjustments (1)	(12)	446	-	-	67	13	17	349	21	(6)	(18)	(8)	-	-
Recurring EBITDA	3 735	3 504	7%	+231	912	878	737	976	844	834	833	1 224	7%	+231

EBITDA in 2021 amounted to €3,723m and recurring EBITDA amounted to €3,735m, a 7% YoY increase (+€231m YoY) vs. recurring EBITDA of €3,504m in 2020, which excludes the impact from Hydro, CCGT and B2C supply activities disposed in Iberia in Dec-20 (combined EBITDA contribution of €153m and net gain of €277m in 2020). Forex has a negative impact of (-€94m YoY mainly due to the 8% BRL depreciation vs. the Euro).

RENEWABLES (62% of EBITDA, €2,294m in 2021) – Excluding the sale of 6 hydro plants in Portugal closed in Dec-20 (EBITDA contribution of €117m in 2020 and net gain of €216m in 2020) and regulatory adjustments in 2020 (+€74m), **Recurring EBITDA increased by 4% YoY (+€87m YoY)** mainly impacted by (i) the growth of wind & solar capacity (avg MWs +9%), (ii) higher asset rotation gains (€530m in 2021, +€97m YoY) and (iii) reversal of hydro tax in Spain in 2Q21 (+€47m), which more than compensated (i) the negative impact of the polar vortex weather event in US (-€35m), (ii) wind resources below 4% LT avg. in 2021 and 2020, (iii) adverse ForEx impact (-€49m) and (iv) weak hydro performance Iberia in 4Q21.

ELECTRICITY NETWORKS (36% of EBITDA, €1,327m in 2021) – EBITDA increased 46% YoY (+€420m), mainly explained by: (i) In Spain, the first year of EBITDA contribution from Viesgo in (+€182m), with efficiency gains from the integration of the two platforms already visible in 4Q21 and the provision reversal of “Lesividad” related to revenues from previous years, booked in 3Q21 (+€54m), (ii) the €54m increase in Portugal, supported by OPEX savings and increase higher regulated revenues, and (iii) €157m increase in the Brazilian networks segment positively impacted by the asset rotation gain (€46m), regulated revenues indexation to inflation and stronger demand (+7%).

CLIENT SOLUTIONS & ENERGY MANAGEMENT (3% of EBITDA, €122m in 2021) – Excluding the disposal of B2C supply business and Castejon CCGTs in Spain closed in Dec-20 (EBITDA contribution of €36m in 2020) and negligible net impact from one-offs (-€2m YoY decline to a net cost of -€4m), **Recurring EBITDA 2021 decreased 73% YoY to €119m. In Iberia, recurring EBITDA decreased to €24m in 2021**, strongly penalized by the sharp increase in energy prices in the wholesale markets, especially in 2H21, that implied a significantly higher production and sourcing costs as well as a negative mark-to-market impact on hedging contracts in energy markets. This compares with very strong energy management results in 2020, that included a €22m recurring EBITDA contribution from Sines coal plants (shutdown in Dec-20). This was just partially offset by the improvement of EBITDA in: (i) supply activities, supported by a recovery in B2B consumption (+32% YoY) and the increase of new services penetration rate (31% vs. 28% in 2020); (ii) Thermal generation, supported by the increase in energy prices and the ancillary services in Spain. In Brazil, EBITDA performance largely reflected the BRL depreciation (8% vs. the Euro), while local currency performance the poor performance of the trading division and a negative impact from coal, with no full pass-through of fuel procurement costs.

(*) **Non-recurring adjustments in 2021: -€12m**, including (i) the one-off gain on the sale of our 50% stake in the energy supplier CHC in Spain to our partner CIDE (+€21m), (ii) cost with Sonatrach agreement (-€17m) and (iii) HR restructuring costs (-€16m); **Non-recurring adjustments in 2020 +€446m** including (i) EBITDA contribution of 6 hydro plants in Portugal and Castejon CCGT and B2C supply sold in Dec-20 (+€153m) (ii) net gains related to portfolio reshaping (+€277m), (iii) restructuring costs (-€53m), (iv) costs related to Sines shutdown (-€18m) and (v) regulatory issues in Brazil and Portugal (+€87m).

(1) Adjustments for one-off impacts, described above(*); (2) Includes namely Poland, Romania, France, Belgium, Italy.

Provisions in 2021 include a non-recurring provision of €48m booked in 3Q21 on a contingency related with the ongoing court case on a fine decided by the Portuguese competition authority regarding ancillary services in 2009-13. Excluding this non-recurring item, other provisions amounted to €13m in 2021.

Amortisations and impairments increased by 6% YoY, to €1,732m, a figure penalized by €232m of impairments on thermal assets in Iberia in 2021. Excluding impairments, amortisations increase +€143m to €1,500m in 2021, reflecting essentially capacity additions, and forex impact (€23m YoY).

Net Financial results amounted to -€511m in 2021. Note that financial costs in 2021 were impacted by non-recurring items, including a €64m gain on the acquisition at a price below book value of the shareholder loans granted by our previous minority partner (25%) at Soto 4 CCGT in Spain and -€24m cost related to repurchase of outstanding debt (vs. -€70m in 2020). Excluding non-recurring items and the volatility of Fx and derivatives, **net financial interests/costs were flat** YoY to -€578m in 2021, prompted by an increase in average cost of debt driven by inflation in Brazil. **Net foreign exchange differences and derivatives** (+€52m YoY) were mostly impacted by US Dollar and BRL derivatives. **Capitalised financial expenses** increased to €91m in 2021 mainly due to increasing volume of work in progress in transmission in Brazil and in renewables.

Income taxes amounted to €262m, representing an effective tax rate of 18% in 2021.

Non-controlling interests increased 24% YoY to €448m in 2021, including: (i) €241m related to EDPR, mainly explained by the increase EDPR's net profit ; (ii) €176m related to EDP Brasil on the back of the strong growth EDP Brasil net profit, even including the impact of BRL depreciation (details on page 27); and (iii) €31m attributable to the 25% minority stake at the electricity networks business in Spain.

Recurring net profit increased 6% YoY, to €826m in 2021, adjusted for the disposal of operations in Iberia in 2020 (hydro in Portugal and Castejon CCGT and B2C supply in Spain) and by one-off impacts*. Reported net profit reached €657m in 2021 (-18% or -€144m YoY) penalized by the referred one-off impacts.

(* Adjustments and non-recurring items impact at net profit level: In 2021 -€169m, including (i) impairments, mostly CCGTs in Iberia (-€164m), (ii) acquisition of debt in minority stake in Spain (+€36m); (iii) provision on competition authority penalty (-€33m), (iv) gain from CIDE disposal (+€21m), (v) debt buyback prepayment fees (-€19m), (vi) curtailment costs in (-€10m); **In 2020 -€21m** including (i) the adjustment of net gain and net profit contribution from disposals (-€384m), (ii) impairments and provisions (€269m, mainly thermal in Iberia), (iii) liability management costs (€55m), (iv) regulation related items and other (€17m) and (v) restructuring costs (€22m).

(1) Includes unwinding of medium, long term liabilities (TEIs, IFRS-16, dismantling & decommissioning provision for generation assets, concessions) and interest on medical care and pension fund liabilities.

CAPEX 2021

Gross investments, including Consolidated Capex and Financial Investments, increased 5% YoY to €3.9 bn in 2021, of which 95% allocated to renewables and electricity networks activities, fully aligned with the energy transition.

Consolidated capex increased 20% to €3.5 bn in 2021. EDP expansion capex increased 22% to €2.9 bn, accounting for 84% of total capex.

Financial investments in 2021 (€414m) were entirely concentrated in renewable technologies, namely: (i) wind onshore projects (€133m), (ii) wind offshore related to our 50% equity stake in Ocean Winds (€112m), (iii) Solar Decentralized Generation (€84m), (iv) Solar projects (€58m), and (v) hydro generation (€24m).

Maintenance capex in 2021 (€570m) was mostly dedicated to our electricity networks business (76% of total), namely with a significant contribution from Viesgo's integration in Spain, and the roll out of digitalization in Portugal, with 5.4m smart meters deployed in 2021, which corresponds to a 17% increase YoY.

Expansion investments (expansion capex + financial investment) in 2021 increased 4% to €3.3 bn, largely dedicated to renewables globally (~88%):

- 1) **€2.9 bn investment in new renewable capacity** was distributed between North America (51%), Europe (32%), Latam & others (17%). (details on page 10).
- 2) **€0.3 bn investment in networks in Brazil (+9% YoY, in Euros, including the adverse FX impact)**. In local currency, transmission capex increased 3% while capex in distribution increased by 41% YoY, namely due to the roll-out of new transmission lines and in distribution, grid expansion and improving quality of service.
- 3) **€0.1 bn investment in CS&EM, mainly in decentralized solar in Iberia and Brazil.**

All in all, net expansion activity investment increased strongly to €2.0 bn in 2021 (+€1.1 bn YoY, vs. €0.9 bn in 2020), mainly due to (i) the acceleration of the build out activity (+€0.1 bn YoY); (ii) lower proceeds from Asset Rotation (+€0.3 bn YoY); (iii) the disposals (net of acquisitions) carried out in 2020 (+€0.6 bn YoY); (iv) +€0.4 bn YoY related to other, mainly anticipation of bill payments to fixed assets' suppliers (+€0.3 bn YoY) aiming to optimize treasury management in the context of high financial liquidity. This was partially mitigated by higher TEI proceeds in the US in 2021 (-€0.4 bn YoY).

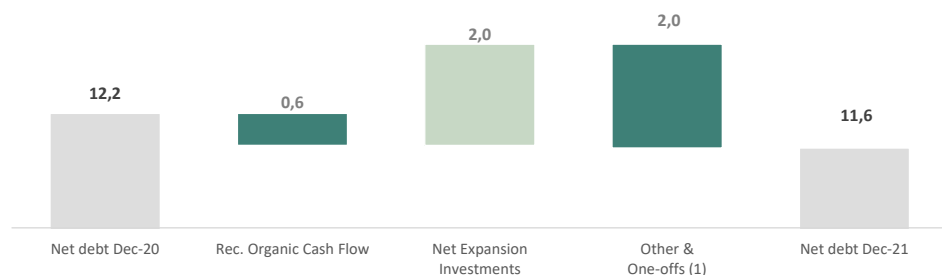

(1) Includes Proceeds from Change in WC Fixed asset suppliers, change in consolidation perimeter, reclassification of asset rotation gains and other; (2) Includes Capex and Financial investment; (3) Includes the items "other", "acquisitions and disposals" and "Proceeds from TEI in US".

Cash Flow Statement

Net Debt Evolution in 2021

(€ Billion)

Recurring organic cash flow decreased by 65% YoY, to €0.6 bn in 2021, including €1.2 bn negative impact associated to the increase of energy prices, mostly in 2H21, namely: (i) €0.8 bn increase in working capital investment on trade receivables & payables and higher inventories (+€0.5 bn); and (ii) negative non-cash impact (-€0.2 bn) related to financial derivatives associated energy management medium term hedging strategy. Excluding these impacts associated to the strong increase of prices in energy, adjusted recurring organic cash flow would have been €1.8 bn in 2021. **Recurring organic cash flow translates the cash generated and available to fulfill EDP's key strategic pillars of sustainable growth, deleveraging and shareholder remuneration.**

Maintenance capex was in line and mostly related to the networks business.

Net expansion amounted to €2.0 bn in 2021, impacted by (i) the acceleration of the build out activity with €3.3 bn expansion investment in 2021 (including financial investments) devoted to new renewable capacity and transmission in Brazil (details on page 5) and (ii) €1.4 bn proceeds from asset rotation in the US and in Brazil.

Regulatory receivables (including interests) decreased by €0.7 bn in 2021 driven by Special Regime activity given escalation in sale prices.

Effects of exchange rate fluctuations resulted in a €0.3 bn increase on net financial debt in 2021, justified by the appreciation of the USD and BRL (USD +8%YoY vs. the Euro; BRL +1% YoY vs. the Euro).

The caption **Other** includes €1.5 bn proceeds from EDPR capital increase concluded in April-21 and €1 bn relative to the 50% equity content attributed by the credit rating agencies to the new €2 bn of hybrid bonds issued in Jan-21 and in Sep-21.

Overall, net debt decreased by €0.7 bn in 2021, to €11.6 bn as of December 2021.

Cash Flow Statement (€ million)	2021	2020	Δ %	Δ Abs.

Total amount of **property, plant & equipment and intangible assets** as of Dec-21 was at €26.0 bn, mainly influenced by the investments YTD (+€3.4 bn), the acquisition of C2, a distributed solar platform in the U.S. (+€0.2 bn); favourable exchange rate movements (+€0.7 bn, driven by the USD and BRL appreciation vs. the EUR). These movements were offset by the depreciation and impairment charges for the period (€1.7 bn) and the transfer of portfolios of renewable assets and transmission assets to assets held for sale or sold as part of the transactions carried on during 2021 (€1.8 bn), as part of the Asset rotation in EDPR and EDPB. As of Dec-21, works in progress amounted to €2.9 bn (12% of total consolidated tangible and intangible assets) of which 85% at EDPR level.

The book value of **financial investments & assets held for sale net of liabilities** (Incl. Equity Instruments at Fair Value) was at €2.2 bn as of Dec-21, mainly influenced by: (i) recognition of wind onshore portfolios in Europe under the account "assets held for sale"; (ii) capital increase at our associate company Ocean Winds (+€0.3 bn); and (iii) the sale of the 80% stake and loss of control in a renewable's portfolio in North America. Financial investments amount to €1.4 bn: 73% at EDPR, 16% at EDP Brazil and 11% in Iberia (Ex-Wind). (Details on page 27)

Tax assets net of liabilities deferred and current remained fairly stable YoY at €0.5 bn as of Dec-21.

Equity book value attributable to EDP shareholders decreased YTD by €0.3 bn to €9.3 bn as of Dec-21, mainly driven by the €0.75 bn dividend distributed in Apr-21 mitigated by the Net profit in the period. **Non-controlling interests** increased by €1 bn vs. Dec-20 following the capital increase concluded in April 2021 at EDPR.

Institutional partnership liabilities increased €0.4 bn vs Dec-20, to €1.5 bn, mainly reflecting two new partnerships which correspond to €0.8 bn of TEI proceeds and USD appreciation which was mitigated by the sale of an 80% stake and loss of control in a renewables' portfolio in North America.

Provisions were down €0.2 bn vs. Dec-20, at €1.1 bn before tax. This caption includes, among others, provisions for dismantling (€0,6 bn), of which €0,3 bn related with wind farms.

Net regulatory receivables after tax were negative as of Dec-21, impacted by the sale of €0.6 bn tariff deficit executed in 2H21 coupled with the strong increase in the electricity wholesale spot price in 4Q21 in Portugal impact on special regime premiums. The electricity system total deficit in Portugal decreased €1.7 bn to €1.7 bn in Sep-21.

Other liabilities (net) increased €6.3 bn vs Dec-20, explained by the increase in liabilities related to swaps on commodities and the tariff deviation in Portugal given the surge in wholesale power prices in 4Q21.

*Dec-20 includes the restatement arising from the change of the fair value of the identifiable assets and liabilities in the acquisition of Viesgo. (1) Excluding the amount corresponding to the impact from the exclusion of ICMS from the calculation of PIS/COFINS from past years in our distribution companies (R\$0.8 Bn), since the receivable (recognized under current tax assets) is a pass-through to the tariff.

EDP's financial debt is mostly issued at holding level (EDP S.A. and EDP Finance B.V.), accounting for 78% of the Group's Nominal Financial Debt. Debt for the Group is raised mostly through debt capital markets (89%), with the remaining through bank loans and commercial paper. EDP made its **first ever green bond issuance in Sep-18 and has since then, issued €6.4 Bn worth of Green Bonds, corresponding to 44% of total bonds outstanding and 39% of total financial debt.**

Regarding the latest rating actions, in Mar-21, S&P upgraded EDP from "BBB-" to "BBB" with a stable outlook. Following EDP's Strategic Update presentation, S&P recognized that several credit protective measures were taken upfront, significantly improving EDP's balance sheet, and that EDP has already partly secured the funding for the upcoming ambitious growth plan. In May-21, Fitch also upgraded EDP to "BBB" with stable outlook and Moody's revised the outlook on EDP from stable to positive, while affirming the "Baa3" senior unsecured rating.

Looking at 2021's major debt maturities and early repayments:

- Maturity of EUR533m bond outstanding, with a coupon of 4.13% (Jan-21).
- Maturity of USD750m bond outstanding, with a coupon of 5.25% (Jan-21).
- Repurchase of 2022 EUR142m bond, with a 2.63% coupon (Jul-21).
- Repurchase of 2023 EUR111m bond, with a 2.38% coupon (Jul-21).
- Repurchase of 2023 EUR138m bond, with a 1.88% coupon (Jul-21).
- Repurchase of 2024 EUR256m bond, with a 1.13% coupon (Jul-21).

In 2021, EDP completed the following operations:

- In Jan-21, €750m Green Hybrid issue, with a coupon of 1.88% (first call date in May-26 and final maturity in 2081).
- In Sep-21, €750m Green Hybrid issue, with a coupon of 1.50% (first call date in Dec-26 and final maturity in 2082).
- In Sep-21, €500m Green Hybrid issue, with a coupon of 1.88% (first call date in Jun-29 and final maturity in 2082).

Subsequent operations:

- Maturity of EUR858m bond outstanding, with a coupon of 2.63% (Jan-22)
- Tariff deficit sale of €562m by EDP SU related with 2021 special regime generation (Jan-22)

Total cash and available liquidity facilities amounted to €9.0 Bn by Dec-21, of which €5.8bn are fully available credit facilities. This liquidity position allows EDP to cover its refinancing needs beyond 2024, on a business-as-usual environment.

(1) Nominal Value includ. 100% of the hybrid bonds; (2) Derivatives designated for fair-value hedge of debt including accrued interest; (3) After FX-derivatives; (4) Net of regulatory receivables; net debt excluding 50% of hybrid bond issues (including interest); Based on trailing 12 months recurring EBITDA and net debt excluding 50% of hybrid bond issue (including interest); Includes operating leases (IFRS-16)

Installed Capacity as of Dec-21 (EBITDA MW)

Assets' average life and residual life

Renewable capacity accounts for 81% of our total installed capacity and is our current main growth driver (EBITDA + Equity MW). Renewables installed capacity as of Dec-21 totaled 21.3 GW, including 1.6 GW Equity of wind & solar in US and Iberia, hydro in Brazil and wind offshore in Europe.

In the last 12 months we added +2.6 GW of wind & solar capacity to our portfolio, including (i) in wind onshore Indiana Crossroads Wind Farm (302 MW), Reloj del Sol (209 MW), Headwaters II (198 MW), Wildcat Creek (180 MW) and Crossing Trails (104 MW) in US, Nation Rise in Canada (100 MW) (ii) in solar the Pereira Barreto I-V in Brazil (204 MWac), the Riverstart plant in the US (200 MWac), the distributed solar assets in the US from C2 Omega acquisition (72 MW) and the Trung Son project which marks our entry in Vietnam (28 MW). Also, as part of our asset rotation strategy, since the beginning of the year we completed the sale of, (i) a 221 MW wind portfolio located in Portugal; (ii) an 80% equity shareholding in the Riverstart Solar project (200 MWac) located in the US, the remaining position is now accounted under equity method (40 MW) (iii) the Build & Transfer Agreement of EDPR's 302 MW Indiana Crossroads Wind Farm in the US (iv) 80% shareholding position in a portfolio of 405 MW, the remaining position is now accounted under equity method (81 MW).

As of Dec-21, our wind & solar capacity under construction totaled 1.8 GW (EBITDA MW). In North America, we have currently 0.3 GW of wind onshore and solar under construction. In Europe, we are building 0.4 GW of wind onshore and solar, mainly in Italy, Spain and Poland. In LatAm, we are building 0.6 GW and 0.5 GW of wind onshore in Brazil and Colombia, respectively.

Our hydro portfolio comprises 5.5 GW in Iberia (45% of which with pumping capacity) and 1.6 GW in Brazil. In LatAm, we additionally own equity stakes on 3 hydro plants totaling 0.5 GW (Jari, Cachoeira-Caldeirão and S. Manoel, all in Brazil) and own an equity stake in a hydro plant under construction in Peru (San Gaban, 78 MW net).

All in all, net expansion activity increased strongly YoY to €1.8 bn mainly impacted by (i) Last year's disposals associated with the portfolio reshaping in Iberia and (ii) lower Asset Rotation proceeds.

USD/EUR	1,18	1,14	-3%	0,04
BRL/EUR	6,38	5,89	-8%	0,49

In 2021, EBITDA amounted to €2,294m, (-12% YoY). Adjusted by the sale of 6 hydro plants in Portugal closed in Dec-20 (EBITDA contribution of €117m in 2020 and €216m gain booked) and regulatory adjustments booked in 4Q20 (+€74m), EBITDA would have increased by 4%.

Adjusted by one-offs above-mentioned, **hydro EBITDA decreased 3% YoY to €535m in 2021 (-€19m YoY).** In Iberia, EBITDA decreased €67m driven by poor hydro resources in 4Q21 (-57% vs. LT average in Portugal in 4Q21). In Brazil, EBITDA increased +38% YoY as the management of the portfolio in an integrated way, the good performance of the allocation strategy and the extension of hydro concessions (€28m), more than compensated the 8% YoY BRL depreciation (-€15m).

Wind and solar EBITDA increased to €1,760m in 2021 (+6% YoY), as the growth in average MWs installed (+9% YoY), higher asset rotation gains (+€104m YoY, excluding FX impact, to €530m) more than compensated the negative effects from (i) the Polar Vortex in February in US, most significantly affecting the Ercot/Texas assets (c.-€35m); (ii) de-consolidation of assets sold under our asset rotation strategy (€103m EBITDA in 2020), including 237 MW in Spain and 80% in a portfolio of 363 MW in US, both closed in Dec-20; (iii) adverse ForEx impact (-€34m).

OPEX in renewables was 9% higher, reflecting the requirements needed to accelerate growth in renewables. In wind and solar, **Core OPEX per Avg. MW,** adjusted by asset rotations, offshore costs, service fees and forex, was broadly flat YoY given O&M strategy and cost control.

Excluding the gain with the sale of the 6 hydro plants (€216m), **Other operating costs (net)** decreased €121m mainly driven by: (i) higher results booked on our asset rotation strategy (+€97m YoY); (ii) the reversion of the Hydro levy in Spain (€47m) and (iii) the negative final adjustment of 2020 Clawback in Portugal booked in 2021 (-€15m vs. +€8m booked in 2020).

Installed Capacity Dec-21 (EBITDA MW)

USA: EBITDA MW by market - Dec-21

In North America, **installed capacity** (6.4 GW EBITDA) is **94% wind and 6% solar PV** (358 MW). Additionally, we own equity stakes in other wind and solar projects, equivalent to 592 MW.

In line with EDP's long term contracted growth strategy, the +1.2 GW additions to portfolio over the last 12 months are PPA-contracted. In 2021, **~90% of total installed capacity is PPA/Hedged contracted**.

Electricity production decreased 2% YoY despite the 6% increase of average installed capacity, as **average wind resources** were 6% short of LT average (P50), particularly in 1Q21 on the back of abnormally low resources in Central and East regions and penalized by the operating restrictions on our wind fleet associated to the Polar Vortex event in US in February. **Average selling price** flat YoY at USD 44/MWh.

Gross profit declined to USD 901m in 2021 (-9% YoY), as benefits from the portfolio expansion and hedging strategy were more than outweighed by the abovementioned extraordinary impact of the Polar Vortex event in US (c. USD 40m) in 1Q21. **PTC Revenue & Other** decreased to USD 210m (-9% YoY), with new PTCs contracted offset by the impact on PTC revenue arising from the asset rotation sale in Dec-20 and Jun-21.

EBITDA in North America decreased 2% to USD 895m in 2021, as the gross profit trajectory and the higher costs given the requirements needed to accelerate growth were only partly compensated by higher asset rotation gains (USD 0.3bn in 2021) booked with (i) the sale of the 80% shareholding position in a portfolio of 405 MW in the US; (ii) the earnout related with the increase of capacity of the Mayflower project; (iii) the sale of an 80% equity shareholding in the Riverstart Solar project, in the context of an asset rotation deal partially closed in Dec-20; and (iv) the Build & Transfer Agreement of EDPR's Indiana Crossroads Wind Farm signed in 2019.

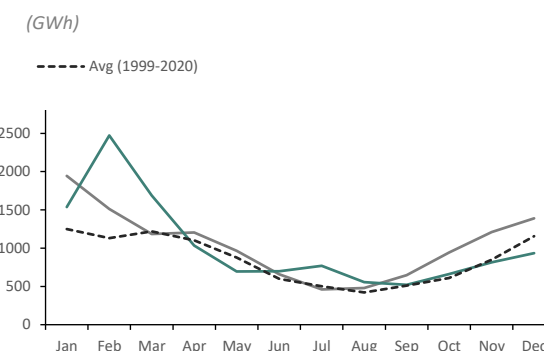

- Sales can be agreed under PPAs (up to 20 years), through Hedges or Merchant prices; Green Certificates (Renewable Energy Credits, REC) subject to each state regulation;
- PTC collected for 10y since COD (\$26/MWh in 2021) & wind farms beginning construction in 2009 and 2010 could opt for 30% cash grant in lieu of PTC;
- ITC for solar projects based upon its capex. This equates to 26% for projects that start construction before 2022 and 22% for projects starting construction in 2023, if COD is at least in 2025.
- Feed-in Tariff for 20 years (Ontario); Renewable Energy Support Agreement (Alberta).
- Technological-neutral auctions (opened to all technologies) in which bidders offer a global package price for the 3 different products (capacity, electricity generation and green certificates);
- EDPR project: bilateral Electricity Supply Agreement under self-supply regime for a 25-year period.

Hydro reserves in Portugal vs. LT Average

Hydro production in Portugal vs. LT Average

In Iberia, installed capacity (8.9 GW EBITDA) is split between hydro (~60%) and wind (~40%).

Wind & solar output in Iberia increased by 15% YoY, to 8.0 TWh, due to higher average capacity installed (+0.3 GW) and an improvement of 6p.p. YoY of wind resources to LT average in Portugal, following a strong 4Q. Average selling price fell by 15% YoY in Spain due to the hedging strategy in place combined with a weaker wind resource, particularly in 3Q21, and with the sharp increase in pool prices. Overall, wind & solar gross profit amounted to €594m (+3% YoY).

Hydro gross profit amounted to €432m, representing a -21% YoY if adjusted by the change in consolidation perimeter on the back of poor hydro resources coupled with pre-hedged volumes and strong increase in electricity prices. Despite hydro resources 13% above-the-average level in Portugal as of 9M21, 4Q21 was 57% below LT average (vs. 3% below the average in 4Q20). For 2022, EDP has hedged 100% of hydro expected production at prices slightly above €60/MWh, for the period 2023-25 EDP has hedged ~40% of hydro expected production at prices slightly below €60/MWh.

Excluding the contribution from the 6 hydro plants disposed in Portugal (€117m contribution in 2020 and €216m net gain) and regulatory adjustments (+€8m in 2020), EBITDA increased 15% YoY to €1,105m in 2021, as the good performance of Wind & Solar was mitigated by the negative Hydro Iberia, particularly in 4Q21. Wind & Solar performance was driven by: (i) higher load factors and average installed capacity, (ii) higher Asset rotation gains YoY (€0.2 Bn), just partly offset by the de-consolidation of wind assets sold in Dec-2020 (-€39m);

Additionally, generation taxes in Spain and clawback levy in Portugal amounted to €38m in 2021, a €5m decline YoY mainly due to: the share of the hydro disposed assets, the suspension of generation tax in Spain and Clawback in Portugal in 2H21; which was partly offset by 2020 clawback final adjustment in Hydro Portugal (-€15m vs. +€8m in 2020). Additionally, in Spain there was a reversion of the hydroelectric levy, following a recent court decision that clarifies the exemption of hydro regional levies for hydro plants in river basins located in a single autonomous region, in EDP's case, our hydro plants in the river Nalón in Asturias region (€47m);

- On 22-Nov, Royal Decree Law 17/2019 was passed, introducing measures aimed at guaranteeing a stable regulatory and economic framework to encourage the development of renewable energy generation in Spain.
- The RD Law 17/2019 updates the "reasonable return" for renewable generation for the next regulatory period starting on 1 January 2020 at a level of 7.398% for assets before RDL 9/2013 and 7.09% for the new ones.
- MWs from previous regime: Feed-in Tariff inversely correlated with load factor throughout the year. Tariff monthly inflation-updated, through the later of: 15y of operation or 2020, + 7 years (cap/floor system);
- ENEOP portfolio: price set in an international competitive tender for 15y (or the first 33 GWh/MW) + 7y (extension cap/floor system).

(1) Includes hedging adjustments; (2) Excludes hedging adjustments and mini-hydros FIT; (3) Source: REN; (4) Includes mini-hydros FIT.

In the Rest of Europe (ex-Iberia), installed capacity is mostly focused on onshore wind (1,843 MW), while solar capacity is based in Romania (50 MW). During the last 12 months, we added +491 MW to our portfolio, including our first wind onshore projects in Greece (45 MW) and UK (5 MW). We currently have 0.3 GW under construction, of 159 MW in Italy, 100 MW in Poland and 21 MW in France & Belgium.

Output increased 9% to 3,3 TWh, as the 1p.p. YoY decline in average load factor, was offset by the 14% increase of average installed capacity to 1.5 GW.

Average selling price increased 27% YoY to €98/MWh.

All in all, **gross profit increased 72% to €403m in 2021** and **EBITDA increased 77% YoY, to €289m.**

- Wind assets (installed until 2013) receive 2 GC/MWh until 2017 and 1 GC/MWh after 2017 until completing 15 years. 1 out of the 2 GC earned until Mar-2017 can only be sold from Jan-2018 and until Dec-2025. Solar assets receive 6 GC/MWh for 15 years 2 out of the 6 GC earned until Dec-2020 can only be sold after Jan-2021 and until Dec-2030. GC are tradable on market under a cap and floor system (cap €35 / floor €29.4); Wind assets (installed in 2013) receive 1.5 GC/MWh until 2017 and after 0.75 GC/MWh until completing 15 years; The GCs issued starting in Apr-2017 and the GCs postponed to trading from Jul-2013 will remain valid and may be traded until Mar-2032.
- Electricity price can be established through bilateral contracts; Wind receive 1 GC/MWh which can be traded in the market. Electric suppliers have a substitution fee for non compliance with GC obligation. From Sep-17 onwards, substitution fee is calculated as 125% of the avg market price of the GC from the previous year and capped at 300PLN.
- Feed-in tariff for 15 years: (i) €82/MWh up to 10th year, inflation updated; (ii) Years 11-15: €28/MWh @2,400 hours, decreasing to €28/MWh @3,600 hours, inflation updated; Wind farms under the RC 2016 scheme receive 15-yr CfD which strike price value similar to existing FIT fee plus a management premium.
- MW <2013 are (during 15 years) under a pool + premium scheme; MW >2013 were awarded a 20 years contract through competitive auctions. According with the auction scheme, the electricity produced by these wind farms is sold on the market with CfD.

(1) Includes €14M costs related with Greece, Hungary and UK

Our renewable portfolio in Brazil encompasses 2.4 GW of consolidated installed capacity, 67% of which hydro, mostly PPA-contracted, and 33% in wind onshore and solar. Additionally, EDP owns equity stakes in hydro plants, representing an attributable capacity of 551 MW.

Worth mentioning, the hydro crisis in Brazil during 2021, the worst in 91 years, exposed the importance of the hedging strategy of the portfolio. In this sense, during this year EDP Brasil managed in an integrated way its supply business and hydro generation in what concerns energy purchase and sale transactions, mitigating the impacts of the dry hydrological scenario and the postponement of the rainy season.

The last quarter of the year ended the trend that was being witnessed until then, impacting the full year results, electricity generated, in 2021, was 1% lower than in 2020, resulting in a 4% decrease in **Hydro gross profit** to R\$1,161m. The extension of the concession period was R\$224m lower YoY having a negative effect on the Hydro gross profit.

Solar installed capacity increased to **204 MW** with the installation of Pereira Barreto I-V Park in 2021. The increased load factor from 38% to 41% YoY coupled with the increase in wind capacity (+51 MW), translated into an increase in wind and solar output of 73% to 1,888 GWh (vs. 1,093 GWh in 2020). This resulted into an overall increase in Wind and Solar gross profit to R\$431m (+101% YoY).

Overall, EBITDA from Renewables in Brazil improved by 11% in local currency (R\$1,432m), therefore having Wind and Solar compensating Hydro's underperformance at gross profit level.

Hydro - Quarterly allocation of physical energy

- Old installed capacity under a feed-in tariff program ("PROINFRA")
- Since 2008, competitive auctions awarding 20-years PPAs

- Hydro capacity is either bilaterally or long term PPA contracted and are obliged to deliver a certain amount of physical guarantee of energy.

(1) Generation Scale Factor (GSF) reflects the total (real) generation, accounted as a proportion of the total volume of Physical Guarantee in the system (when has a strong volatility on quarterly basis).

Our Electricity Networks segment includes distribution of electricity in Portugal, Spain and Brazil, and the activity of transmission, in Brazil. Overall, our regulated asset base (RAB) amounts to €6.2 Bn.

Overall, **distributed electricity increased +12% (+9 TWh)** due to not only a recovery of the industrial segment across geographies, mainly in Brazil, but also due to the acquisition of Viesgo (+7% excluding Viesgo).

The total number of installed smart meters increased to 5.7m across geographies. Leveraged by the roll out of smart meters, which already have a 69% penetration in EDP's Iberian Electricity Networks, the volume of telemetered energy in Portugal, increased +3% to 77%.

(1) Financial assets as to the transmission business. Regulated Asset Base in Spain updated with provision reversal "Lesividad"; (2) Supplies & services + Personnel costs; (3) Net of subsidiaries.

Electricity distribution in Portugal

Electricity distributed in Portugal **increased +1% in 2021**, justified by the economic recovery witnessed in the industry and services sectors.

Regulated revenues amounted to €1,055m, +3% YoY as regulated revenues in 2020 included some negative adjustments related to previous years' events, although the rate of return on RAB showed a slight YoY decline to 4.76% in 2021 (vs. 4.85% in 2020), explained by the slight decline of the Portuguese government 10-year bond yields over the last year.

Strong net operating costs performance (-5% YoY), benefiting from a year without any severe weather events to register. Additionally, as we continue to accelerate the pace of digitalization with higher volumes of installed smart meters, we have increased remote orders (+44% YoY): from cuts and reconnections, to commercial service orders and also readings.

Overall, **EBITDA increased by 13% YoY (+€60m) to €531m supported by efficiency improvements at the OPEX level and a higher regulated revenue.**

Electricity distribution in Spain

The acquisition of Viesgo, closed in December 2020, has more than doubled the size of our electricity distribution operations in Spain.

Gross profit increased by 143% to €470m in 2021, with Viesgo contributing to this significant increase.

OPEX increased 101% YoY, to €117m in 2021, as a result of the above-mentioned acquisition. On a like for like basis, the **controllable costs per customer decreased 27%** in the Spanish networks. OPEX was also impacted by a non-recurring cost related to curtailment in Spain of €8m. Additionally, the integration of Viesgo within EDP operations in Spain continues evolving at good pace, having the corporate centre of Viesgo been fully integrated within EDP Spain, in the beginning of 4Q21.

Excluding one-offs, EBITDA grew 178% to €377m, with Viesgo's contribution amounting to €182m. Excluding Viesgo and curtailment one-off cost, EBITDA increased by 44% YoY, mainly impacted by "lesividad" provision reversal (+€54m), following the Supreme Court order (481/2020) regarding the principle of remuneration of some assets already depreciated but still in operation and partially offset by a lower rate of return on RAB of 5.58% (vs. 6.0% in the 2020).

EDP Spain's RAB was updated with the provision reversal.

(1) Last resort supply activities in Portugal are now considered together with the remaining Supply activities. Electricity Networks and Client Solutions & Energy management results, including 2020 numbers, were adjusted accordingly.

Distributed electricity in Brazil increased +7% YoY in the 2021, as a result of the recovery of the economic activity, mainly the industrial and commercial sectors and the expansion in the number of customers connected (+2.2%).

Gross profit from distribution increased by 24% YoY, at R\$2.8 bn, following the positive impact of inflation indexation on annual tariff updates, stronger demand and lower losses from the sale in wholesale market of the electricity volumes' surplus contracted through PPA but not consumed by our client base (over-contracting). Both our distribution concessions have regulated revenues indexed to IGP-M (wholesale prices index). Annual tariff updates resulted at EDP ES in a 9.75% tariff increase in Aug-21 (IGP-M of +33.75% considered) and at EDP SP a 12.4% tariff increase in Oct-21 (IGP-M of +24.9% considered). Higher inflation resulted also on a positive impact from the update in the concessions asset's residual value (+R\$215m), factoring in a higher consumer price index (IPCA at +10.06%).

Gross profit from transmission increased by 77% YoY, reaching R\$693m, following the partial commissioning of lines 18, Q and 21, and 07 and 11 at 100% and the evolution of construction works in the remaining lines. **EBITDA from transmission increased to R\$ 985m**, +R\$ 614m YoY, from which R\$ 321m correspond to the gain from the disposal of a transmission portfolio composed by three transmission lines, aligned with EDP's asset rotation strategy in the transmission business in Brazil, defined in the business plan 21-25.

In 2021 the Annual Allowed Revenue ("RAP") ascended to R\$144m and the correspondent Regulatory EBITDA (RAP excl. adj. costs and taxes) to R\$120m.

Brazilian Networks OPEX was higher than last year (+2% YoY), although the lower personnel costs, higher costs with supplies and services in both distribution and transmission segments contributed to the increase. **Other operating costs** decreased and had a positive impact at EBITDA level due to the asset rotation gains.

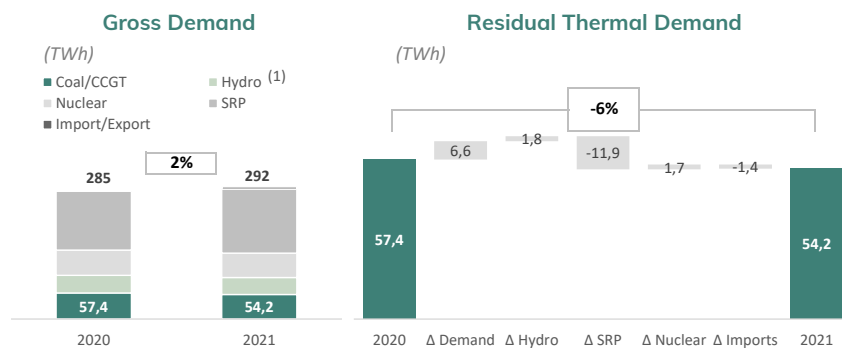

Overall, EBITDA from electricity networks increased by 73% YoY to R\$2,753m, positively impacted by the disposal gains in transmission, the regulated revenues indexation to inflation and a solid recovery in demand.

- Two distribution concessions, both 100% owned by EDP Brasil: EDP SP, in São Paulo, with 4-year regulatory period last renewed in Oct-19; EDP ES, in Espírito Santo with 3-year regulatory period last time renewed in Aug-19. The regulated WACC is currently defined at 8.09%.

- EDP operates partially three transmission lines (lot 18, lot 21 and lot Q), acquired recently CELG-T portfolio and is developing two other projects: MGTE acquired in Feb-21 and the recently awarded Lote 1 in the Auction 1/2021.

Iberian electricity market context

During 2021, electricity demand in Iberia increased 2% YoY, as the economic activity continued to display recovery signs from the COVID-19 pandemic lockdown measures, despite the consumption was still below pre pandemic levels. **Residual thermal demand (RTD)**, i.e. coal and CCGT generation, decreased 6% YoY in 2021 (-3.2 TWh YoY), reflecting mainly: (i) +11.9 TWh increase in SRP mainly driven by the recovery of wind resources in Iberia; (ii) +1.4 TWh increase in net imports. This was partially mitigated by weaker hydro resources in 2021 (specially in 4Q21), with -1.8 TWh generation YoY, and by -1.7 TWh Nuclear generation YoY.

Average electricity spot price highly increased in 4Q21, reaching average of €211/MWh. This translated into an increase of 230% YoY in 2021, to ~€112/MWh, supported by a strong increase in commodity prices, namely gas (+363% YoY) and CO2 allowances (+115% YoY). Average electricity final price in Spain increased 182% YoY in 2021, to €117/MWh, reflecting the evolution of wholesale spot price and higher demand for restrictions.

Supply Iberia

The number of electricity clients in Portugal and Spain, showed a slight decrease of -1% YoY, with the penetration rate of new services per client increasing to 31% in Dec-21 (+3 p.p. YoY), following a 17% and 42% increase in the number of home appliances' maintenance and health insurance contracts YoY, respectively, as EDP maintains its focus on service quality and is leveraging on its customer portfolio to increase the share of wallet. EDP ends 2021 with more than 1 million clients subscribing its services business.

EDP keeps growing into new energy solutions involving its clients in the energy transition. In 2021, EDP contracted 141MWp of distributed solar in clients' facilities in Iberia and other European markets (more than 2x vs. 2020), with the number of new solar installations being 48% higher than in 2020. On electric mobility, EDP increased by 56% the number of installed electric charging points, reaching 3.508 in 2021.

Excluding the impact from the disposal in Dec-20 of our B2C clients portfolio in Spain to Total, total electricity supplied in 2021 showed a significant 11% YoY growth, on the back an increase in the B2B segment both in Spain and in Portugal, partially offset by a slight decrease in electricity supplied in the regulated B2C segment in Portugal, given by the decrease in the number of clients.

Excluding one-off impacts (€21m CIDE gain in 2021 and €45m in 2020 related mainly with gain on the disposal in Dec-20 of our B2C clients portfolio in Spain to Total) and adjusting for the operations disposed (€36m EBITDA contribution in 2020), EBITDA at our supply activities in Iberia rose to €101m (vs. €60m in 2020) supported by: (i) the YoY recover of electricity demand in the industrial segment, which in 2020 was penalized by COVID lockdowns; (ii) increased installations of distributed solar and higher penetration rate and efficiency of new services. This was mitigated by an increase in sourcing costs in 4Q21, due to unexpected low temperatures and consequent increase in residential consumption.

EDP's electricity clients portfolio in Iberia (~5.0m clients), has a significant weight of residential and SME clients, corresponding to ~35% of total consumption.

Thermal generation & Energy management Iberia

Electricity production in 2021 decreased 23% YoY, largely explained by the reduction in CCGT output (-34% YoY) due to lower residual thermal demand and the sale of Castejón plants (-843MW). Excluding the effect of Sines' closure, coal load factor increased YoY to 38%.

Avg. thermal production cost posted an 72% YoY increase (to €74/MWh in 2021), mainly driven by higher CO₂ and gas costs, which was partially mitigated by hedges on gas sourcing costs.

Energy Management and Thermal EBITDA amounted to -€92m in 2021 reflecting (i) negative EBITDA contribution from energy management activities after a very strong performance in 2020, (ii) significant increase in sourcing costs to the supply business as a result of the sharp rise in energy prices, (iii) negative impact of mark-to-market on hedging contracts mostly on the back of higher energy prices and the widening of the TTF-HH spread.

Our thermal portfolio in Iberia encompasses 4.3 GW installed capacity, which plays an active role in ensuring the security of electricity supply: 67% in CCGT, 29% in coal, 4% in nuclear and 1% of cogeneration and waste.

(1) Only includes Portugal; (2) Includes SMEs. Last resort supply activities in Portugal are now considered together with the remaining Supply activities. Consequently, Electricity Networks and Client Solutions & Energy management results, including 2020 numbers, were adjusted accordingly. (3) Includes fuel costs, CO₂ emission costs and hedging results; (4) Includes Italy and Poland; (5) Includes Nuclear, Cogen. & Waste. (6) Includes only Coal production in Spain.

(1) Includes GSF, PLD and MRE

As part of our risk-controlled approach to its portfolio management, EDP follows a hedging strategy to mitigate its GSF/PLD risk, aiming at reducing the volatility of earnings. Therefore, supply and generation activities are managed in an integrated way, allowing the optimization of the portfolio as a whole.

There was a significant decline in electricity sales by 40% YoY, however this mainly refers to low margin activities having impacted results. Subsequently, **EBITDA from supply and energy management in Brazil decreased to R\$124m**, -R\$71m YoY. In 2020, EBITDA was positively impacted by an accounting change in the long-term contracts, of R\$206m due to a market restatement of these contracts.

In addition, as **distributed solar** gains traction in Brazil, EDP Brasil has been expanding in Solar PV through EDP Smart both organically and through acquisitions, and has a portfolio of 100 MWp contracted, and 75 MWp already installed, contributing with a gross margin for the supply business of R\$65m (+35% YoY).

In 2021 Brazil witnessed a historically dry season, which led to a significant **increase in Pecém production to 3,417 GWh**, following the dispatch order by the National System Operator (ONS). **Our thermal generation plant** availability was in line with last year, improving from 92% to 94%. Impacting gross profit, non-manageable expenses were 61% higher due to the increase in coal costs, due to the current situation in the dollar-indexed coal market and the reduction in supply. Worth also highlighting that Pecém has a fixed monthly revenue of R\$80.5m annually adjusted by inflation (IPCA), with the last update in Nov-21 of +10% YoY. Finally, Pecém result was negatively impacted, -R\$140m, by the hedging strategy applied to coal procurement.

As a result, **EBITDA from thermal generation decreased by 13% YoY in 2021 to R\$503m**, in line with the impacts referenced above.

(1) For Group segment reporting purposes, Holdings and other activities at EDP Brazil level are distributed across business segments; (2) Weighted-average GSF; (3) Values of Pecém individual accounts.

Installed capacity by Country as of Dec-21

Breakdown by Technology as of 2021

(GW Capacity & TWh of Production)

- Wind & Solar
- Hydro
- Gas
- Coal
- Other

(1) Installed capacity that contributed to the revenues in the period; (2) Includes Poland, Romania, France, Belgium and Italy; (3) Includes Canada and Mexico; (4) Includes Nuclear, Cogeneration and Waste.

Sustainable Development Goals (SDG)

EDP is committed to ensuring that its activity contributes actively to 9 of the 17 United Nations SDG to be achieved by 2030.

For more information please visit our ESG Performance Report

(1) The stationary emissions do not include those produced by the burning of ArcelorMittal steel gases in EDP's power plant in Spain; (2) Scope 2 emissions according with GHG Protocol based location methodology; (3) Accidents occurred at the place and working time or on a journey, with 1 or more days of absence and fatal accidents.

EDP Stock Performance on Euronext Lisbon

EDP's Main Events

- 04-Jan:** EDP secures PPAs for two solar projects in the U.S. totalling 275 MW
- 18-Jan:** EDP reached an agreement to acquire 85% of a distributed solar platform in the U.S.
- 25-Jan:** EDP prices EUR 750 Million subordinated green notes
- 12-Feb:** EDP enters Hungarian market with a 50 MW solar PV project
- 03-Mar:** Completion of the ABB and approval by EDPR BoD of a capital increase proposal of c.€1.5 Bn
- 16-Mar:** S&P Upgrades EDP to "BBB" with stable outlook
- 09-Apr:** EDP announces Asset Rotation deal of a 405 MW wind portfolio in the US for an EV (100%) of \$0.7bn
- 14-Apr:** Payment of Dividends - Year 2020
- 16-Apr:** Completion of EDPR c.€1.5 Bn capital increase
- 11-May:** Moody's revises outlook to positive
- 12-May:** Fitch upgrades EDP to 'BBB' with stable outlook
- 28-May:** EDP enters the Chilean market with a 628 MW wind and solar portfolio
- 30-Jun:** EDPR enters Vietnam with 28 MWac solar PV project
- 30-Jun:** EDP Energias do Brasil wins 1 lot at the transmission auction no. 1/2021
- 1-Jul:** EDP completes Asset Rotation deal of a 405 MW wind portfolio in the US
- 1-Jul:** Results and pricing of the cash tender offers for outstanding debt instruments
- 20-Jul:** EDP sells Portuguese tariff deficit for €503 million
- 21-Jul:** EDP enters the UK onshore market with a 544MW Wind and Solar portfolio
- 21-Jul:** Asset rotation deal for 221 MW wind portfolio
- 04-Aug:** EDP signs asset rotation deal of a 149 MW wind portfolio for an EV of €303 million
- 06-Sep:** EDP prices EUR 1,250 million subordinated green notes
- 08-Sep:** EDP announces upsize to 80% stake of the 405 MW Asset Rotation in the US
- 14-Oct:** EDP Brasil acquires Celg transmission business
- 16-Oct:** ERSE announces its proposal for tariffs in 2022 and parameters for 2022-2025
- 19-Oct:** Asset rotation deal of transmission lines in Brazil
- 25-Oct:** EDP Brasil announces program for acquisition of treasury shares and hydro disposal process
- 03-Nov:** EDP establishes growth platform for APAC through the acquisition of Sunseap
- 15-Nov:** EDP signs asset rotation deal of a 181 MW operating wind portfolio in Spain
- 10-Dec:** Update of the terms of the strategic partnership between EDP and CTG
- 15-Dec:** ERSE announces electricity tariffs for 2022 and parameters for 2022-2025
- 28-Dec:** EDP completes asset rotation deal of transmission lines in Brazil
- 30-Dec:** EDP concludes a build & transfer agreement for a 302 MW wind farm project in the US
- 30-Dec:** EDP completes asset rotation deal of a 200 MWac solar project in the US
