Main highlights for the period

Key Operational Data	1Q22	1Q21	Δ %	Δ Abs.	
Installed capacity (MW)	25,645	23,928	7%	1717	EDP's financial performance in the first quarter of 2022 was strongly impacted by the extreme drought in Portugal in winter 2021/2022, the driest in the last 90 years, which resulted in a record shortfall of EDP's hydro production in the Iberian market of 2.6TWh compared to the historical average. This hydro shortfall resulted in the need to purchase electricity in the Iberian wholesale market, in order to satisfy the consumption of the customer portfolio, in a quarter of historical maximum prices (average electricity price €229/MWh in the 1Q22, a rise of 407% year-on-year). The strong increase in the cost of electricity sold, which did not impact our clients, implied a €0.4bn loss in 1Q22 in terms of EBITDA, which justifies the negative net result of -€76m recorded by EDP in the 1Q22 (a decrease of €256m year-on-year).
Weight of Renewables (1)	78%	79%	-	-1p.p.	
Production (GWh)	17,055	16,613	3%	+443	
Weight of Renewables (1)	75%	85%	-	-10p.p.	
Scope 1 & 2 Emissions Intensity (gCO2/kWh)	152	112	35%	+40	
Customers supplied (thousand of contracts)	9,323	9,254	1%	+69	EDP's EBITDA fell by 18% to €710m in the 1Q22, with the losses associated with the hydro shortfall in the Iberian Peninsula being only partially offset by the positive performance of the remaining business areas.
Customers connected (thous.)	11,459	11,298	1%	+162	

Income Statement (€ million)	1Q22	1Q21	Δ %	Δ Abs.	
Gross Profit	1,154	1,308	-12%	-153	The conditions of low hydro production and high prices in Iberia, led to a significant increase in thermal production, which increased by 160% to 2.4TWh, mitigating the losses associated with the hydro deficit.
OPEX	411	357	15%	+55	On Renewables segment, EDP Renováveis recorded an EBITDA growth of 46% (+€125m) to €394m, with a 13% increase in installed capacity, a 14% increase in renewable energy production and a 12% increase in the average sale price.
Other operating costs (net)	91	100	-10%	-10	
Operating costs	502	457	10%	+45	
Joint Ventures and Associates (2)	57	13	-	+44	The electricity networks segment EBITDA increased 17% (+€53m) to €362m, mainly on the back of the 51% increase in EBITDA in the electricity networks in Brazil, as a result of the investment plan in the distribution and transmission networks, including the completion of the acquisition of CELG-T in February 2022, as well as the higher inflation impact on electricity tariff increases and the appreciation of the Brazilian Real against the Euro (+12%). In Iberia, EBITDA rose 2%, being the investment focused on networks digitalization (700 thousand smart meters installed in the last 12 months), with the electricity distribution network registering the best historical quality of service indicator (TIEPI) for a first quarter of the year.
EBITDA	710	864	-18%	-155	
EBIT	322	496	-35%	-174	
Financial Results	(173)	(123)	-41%	-50	
Income taxes & CESE (3)	74	114	-35%	-40	
Non-controlling Interest	151	79	91%	+72	
Net Profit (EDP Equity holders)	(76)	180	-	-256	

Key Performance indicators (€ million)	1Q22	1Q21	Δ %	Δ Abs.	
Recurring EBITDA (4)	710	844	-16%	-134	Net financial costs increased €50m to €173, with the average cost of debt increasing to 3.9%, reflecting the higher cost of debt in Brazil. Average cost of debt excluding debt denominated in Brazilian Reais (14% of consolidated debt) decreased 20bps to 2.3% in 1Q22. In March 2022, EDP issued €1.25 bn of green bonds with a maturity of 7.5 years at a rate of 1.9%.
Renewables	405	445	-9%	-40	
Networks	362	310	17%	+53	
Clients solutions & EM	(71)	86	-	-157	
Other	13	2	460%	+11	
Recurring net profit (4)	(76)	159	-	-235	Gross investments increased more than 3x to 2.3 bn in 1Q22. In March 2022, net debt amounted to €13.1 bn , reflecting the conclusion of the acquisitions of CELG-T, in Brazil, and Sunseap, in Singapore, which represented the beginning of the Group's expansion to eight new markets, establishing a new growth platform in APAC.

Key Financial data (€ million)	Mar-22	Dec-21	Δ %	Δ Abs.	
Net debt	13,134	11,565	14%	+1,569	For 2022, it is expected that the loss related to the hydro shortfall in 1Q22 is compensated with the good performance in some of EDP's businesses, including EDP Renováveis, EDP Brasil, Iberian networks and more thermal production.
Net debt/EBITDA (x) (5)	4.3x	3.5x	24%	0.8x	
FFO / Net Debt	16.6	20.7	-20%	-413p.p.	

(1) Including Wind, Solar, Hydro and mini-hydro capacity; (2) Full details on page 26; (3) CESE: Extraordinary contribution from the energy sector; (4) Excluding one-off impacts as per page 3 (EBITDA) and page 4 (Net profit); (5) Net of regulatory receivables; net debt excluding 50% of hybrid bond issues (including interest); Based on trailing 12 months recurring EBITDA and net debt excluding 50% of hybrid bond issue (including interest); Includes operating leases (IFRS-16)

EBITDA 1Q22

108% Energy Transition

EBITDA in 1Q22 decreased 18% to €710m, without any one-off contribution. Excluding 1Q21 positive one-off impact, recurring EBITDA posted a 16% YoY decrease (-€134m YoY) vs. recurring EBITDA of €844m in 1Q21.

ForEx has a positive impact of +€35m YoY mainly due to the 12% BRL appreciation vs. the Euro.

RENEWABLES (58% of EBITDA, €405m in 1Q22) – EBITDA decreased by 9% YoY (-€40m YoY) mainly impacted by the very weak hydro resources in Iberia (-70% below LT. average in 1Q22 vs. +28% above in 1Q21) in the context of record-high electricity pool prices, which was mitigated by (i) the growth of wind & solar capacity (avg MWs +9%), (ii) the recovery of wind resources (+5 p.p. YoY) and (iii) last year's negative impact of the polar vortex weather event in US (-€35m), (iv) favorable ForEx impact (+€15m).

ELECTRICITY NETWORKS (52% of EBITDA, €362m in 1Q22) – EBITDA increased 17% YoY (+€53m), mainly explained by: (i) €48m increase in the Brazilian networks segment mainly reflecting the regulated revenues indexation to inflation on annual tariff updates (€32m) and stronger BRL (+€16m), (ii) In Spain, with efficiency gains from the integration of the two platforms by the end of 2021 and the reversal of the hydro tax related with hydro plants acquired from Viesgo (+€8m) and, (iii) in Portugal, the evolution was marked by lower regulatory revenues as part of the new regulatory period and OPEX normalization following covid-19 related lockdown in 1Q21.

CLIENT SOLUTIONS & ENERGY MANAGEMENT (-10% of EBITDA, -€71m in 1Q22) – Excluding the one-off gain in 1Q21 (€21m) on the disposal of our 50% stake in the supplier CHC in Spain, **Recurring EBITDA 1Q22 -€157m to -€71m**, reflecting the weak performance of Iberian activities in the context of very high energy prices, coupled with the driest period from October until March in the last 90 years.

On an integrated basis, Hydro and CS&EM Iberia declined -€354m YoY driven by: (i) a 2.6 TWh hydro production shortfall vs. normalized year, where expected production was 100% hedged at prices ~€60/MWh and avg. electricity pool price was at €229/MWh - highest wholesale energy prices ever recorded in a quarter – which resulted in a ~€0.4bn loss; (ii) supply activities penalized by the seasonal effect of higher sourcing costs from B2C clients in 1Q22 higher than in the rest of the year; (iii) negative impact (-€84m) mark-to-market impact from gas hedging contracts, in 1Q22, mitigated by (+€43m) higher operational margins related to MtM losses already booked in previous quarters. This was partly mitigated by improved thermal competitiveness combined with higher production (+2.4 TWh YoY).

(* **Non-recurring adjustments in 1Q22:** no one-off impact at EBITDA level in 1Q22; **Non-recurring adjustments in 1Q21: +€21m** including the one-off gain on the sale of our 50% stake in the energy supplier CHC in Spain to our partner CIDE.

(1) Adjustments for one-off impacts, described above(*); (2) Includes namely Poland, France, Italy and APAC.

Net Profit Attributable to EDP Shareholders	(76)	180	-	-256	180	164	167	146	(76)	-	-256

Amortisations and impairments increased by 8% YoY, to €386m, reflecting essentially capacity additions, and forex impact (+€10m YoY).

Net Financial results amounted to -€173m in 1Q22. Net financial interests increased 27% YoY to -€156m in 1Q22, driven by Forex and higher cost of debt indexed to inflation in Brazil. Average cost of debt increased 70bps to 3.9%, while cost of debt excluding BRL (mostly Euro and USD denominated) decreased 20bps to 2.3%. Capitalised financial expenses decreased to €6m in 1Q22 with the completion of significant electricity transmission projects in Brazil.

Income taxes amounted to €23m, representing an effective tax rate of 16% in 1Q22.

Non-controlling interests increased YoY to €151m in 1Q22, including: (i) €87m related to EDPR, mainly explained by the increase in net profit; (ii) €44m related to EDP Brasil on the back of the strong growth in net profit and the impact of BRL appreciation (details on page 26); and (iii) €20m attributable to the 25% minority stake at the electricity networks business in Spain.

Recurring net profit decreased to -€76m in 1Q22, penalized by the previously referred €0.4bn EBITDA loss associated to the need to buyback hydro shortfall volumes in Iberia at record high wholesale electricity prices.

(*) Adjustments and non-recurring items impact at net profit level: In 1Q21 +€21m related to the gain from CIDE disposal (+€21m).

(1) Includes unwinding of medium, long term liabilities (TEIs, IFRS-16, dismantling & decommissioning provision for generation assets, concessions) and interest on medical care and pension fund liabilities.

CAPEX 1Q22

99% of Gross Investments in the Energy Transition

Net expansion activity (€ million)	1Q22	1Q21	Δ %	Δ Abs.
Expansion Capex	757	464	63%	+293
Financial investments	1,430	123	1068%	+1,308
Proceeds Asset rotation	(365)	-	-	-365
Proceeds from TEI in US	(3)	0	-	-3
Acquisitions and disposals	1	(29)	-	+29
Other (1)	(409)	638	-	-1,047
Net expansion activity	1,410	1,196	18%	+214

Gross investments, including Consolidated Capex and Financial Investments, increased more than 3x to €2.3 bn in 1Q22, of which 99% allocated to renewables and electricity networks activities, fully aligned with the energy transition.

Consolidated capex increased 49% to €0.9 bn in 1Q22. EDP expansion capex increased 63% to €0.8 bn, accounting for 88% of total capex.

Financial investments in 1Q22 amounted to €1.4 bn, mainly focused on Sunseap (€0.7 bn) and CELG-T (€0.3 bn) acquisitions. The remaining were entirely concentrated in renewable technologies, namely: (i) wind onshore projects (€0.1 bn), (ii) wind offshore related to our 50% equity stake in Ocean Winds (€0.1 bn), and (iii) Solar projects (€0.1 bn).

Maintenance capex in 1Q22 (€99m) was mostly dedicated to our electricity networks business (76% of total), namely with a significant contribution from distribution and the roll out of digitalization in Brazil and Iberia, with 5.9m smart meters deployed in 1Q22, which corresponds to a 16% increase YoY.

Expansion investments (expansion capex + financial investment) in 1Q22 more than tripled to €2.2 bn, largely dedicated to renewables globally (~81%):

Investment activity in 1Q22

(€ million)

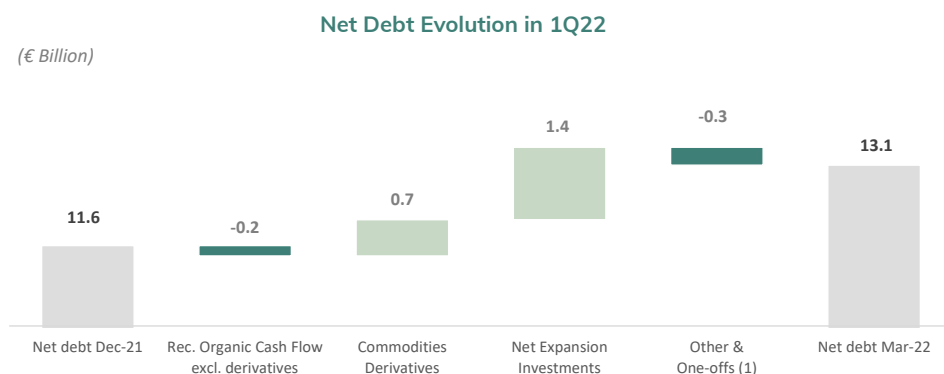

1) **€1.8 bn investment in new renewable capacity** was distributed between North America (29%), Europe (12%), Latam (14%) and APAC (45%). (details on page 10).

2) **€0.4 bn investment in networks in Brazil (more than 4x higher YoY), including CELG-T acquisition.** In local currency, transmission investments increased 7x while capex in distribution increased by 59% YoY, namely due to the acquisition of new transmission lines and in distribution, grid expansion and improving quality of service.

All in all, net expansion activity investment increased strongly to €1.4 bn in 1Q22 (+€0.2 bn YoY, vs. €1.2 bn in 1Q21), mainly due to the acceleration of the build out activity (+€1.6 bn YoY). This was partially mitigated by higher proceeds from Asset Rotation (-€0.4 bn YoY) and from other (-€1.0 bn YoY), which mainly includes bill payments to fixed assets' suppliers made in 1Q21 and higher associate loans.

(1) Includes Proceeds from Change in WC Fixed asset suppliers, change in consolidation perimeter, reclassification of asset rotation gains and other; (2) Includes Capex and Financial investment; (3) Includes the items "other", "acquisitions and disposals" and "Proceeds from TEI in US".

Recurring organic cash flow decreased YoY, to -€0.5 bn in 1Q22, including €0.7 bn negative impact associated to the increase of energy prices MTM on derivatives and margin calls. **Excluding this impact recurring organic cash flow would have been €0.2 bn in 1Q22, in line YoY.** Recurring organic cash flow translates the cash generated and available to fulfill EDP's key strategic pillars of sustainable growth, deleveraging and shareholder remuneration.

Maintenance capex was in line and mostly related to the networks business.

Net expansion amounted to €1.4 bn in 1Q22, impacted by (i) the acceleration of renewables activity with expansion to APAC through Sunseap Acquisition and increase of our Transmission Portfolio with CELG-T acquisition (€0.3Bn) in Brazil. The other expansion investment (including financial investments) devoted to new renewable capacity and transmission in Brazil (details on page 5) was mitigated by €0.4 bn proceeds from asset rotation in Portugal.

EUR/USD	1.11	1.13	2%	+0.02
BRL/EUR	5.30	6.31	19%	+1.01

Regulatory receivables (including interests) decreased by €0.7 bn in 1Q22 driven by Special Regime activity given escalation in sale prices.

Effects of exchange rate fluctuations resulted in a €0.4 bn increase on net financial debt in 1Q22, justified by the appreciation of the BRL and USD (BRL +19% YoY vs. the Euro; USD +2% YoY vs. the Euro).

Overall, net debt increases by €1.6 bn in 1Q22, to €13.1 bn as of March 2022.

(1) Includes changes in regulatory receivables, forex impact, one-offs and other; (2) Excluding Regulatory Receivables; (3) Maintenance capex includes payables to fixed assets suppliers.

Deferred tax on Regulat. Receivables (-)	358	142	+216
Regulatory Receivables (Net of tax)	-851	-284	-567

Total amount of **property, plant & equipment and intangible assets** as of Mar-22 was at €28.0 bn, mainly influenced by the additions YTD (+€1.2 bn), the favourable exchange rate movements (+€0.6 bn, driven by the BRL and USD appreciation vs. the EUR) and the acquisition of Sunseap and CELG-T. These movements more than compensated the depreciation for the period (€0.4 bn). As of Mar-22, works in progress amounted to €3.4 bn (14% of total consolidated tangible and intangible assets) of which 87% at EDPR level.

The book value of **financial investments & assets held for sale net of liabilities** (Incl. Equity Instruments at Fair Value) was at €2.5 bn as of Mar-22. Financial investments amount to €1.5 bn: 71% at EDPR, 18% at EDP Brazil and 10% in Iberia (Ex-Wind). (Details on page 26)

Tax assets net of liabilities deferred and current decreased €0.2 bn to €0.4 bn as of Mar-22.

Equity book value attributable to EDP shareholders decreased YTD by €0.2 bn to €9.1 bn as of Mar-22, driven by the Net profit in the period. **Non-controlling interests** increased by €0.3 bn vs. Dec-21 reflecting the financial performance of subsidiaries and exchange rate movements.

Institutional partnership liabilities broadly flat vs Dec-21, at €1.5 bn, as the benefits appropriated by the tax equity partners during the period were mitigated by the exchange rate performance.

Provisions were flat at €1.1 bn before tax vs. Dec-21. This caption includes, among others, provisions for dismantling (€0.6 bn), of which €0.3 bn related with wind farms.

Net regulatory receivables after tax were negative as of Mar-22, impacted by the sale of €0.6 bn tariff deficit executed in Jan-22 coupled with the impact on special regime premiums from the strong increase in the electricity wholesale spot price in 1Q22 in Portugal, despite weaker than avg. wind resource availability. The electricity system total deficit in Portugal decreased 0.4 bn to €1.4 bn in Mar-22.

Other liabilities (net) increased €3.7 bn vs Dec-21, explained by the increase in liabilities related to swaps on commodities and the tariff deviation in Portugal given the surge in wholesale power prices. This caption also includes **lease liabilities**, €1.2 bn as of Mar-22.

(1) Excluding the amount corresponding to the impact from the exclusion of ICMS from the calculation of PIS/COFINS from past years in our distribution companies (R\$0.7 Bn), since the receivable (recognized under current tax assets) is a pass-through to the tariff.

EDP's financial debt is mostly issued at holding level (EDP S.A. and EDP Finance B.V.), accounting for 81% of the Group's Nominal Financial Debt. Debt for the Group is raised mostly through debt capital markets (84%), with the remaining through bank loans and commercial paper. EDP made its **first ever green bond issuance in Sep-18 and has since then, issued €7.7 Bn worth of Green Bonds, corresponding to 56% of total bonds outstanding and 41% of total financial debt.**

Regarding the latest rating actions, in Mar-21, S&P upgraded EDP from "BBB-" to "BBB" with a stable outlook. Following EDP's Strategic Update presentation, S&P recognized that several credit protective measures were taken upfront, significantly improving EDP's balance sheet, and that EDP has already partly secured the funding for the upcoming ambitious growth plan. In May-21, Fitch also upgraded EDP to "BBB" with stable outlook and Moody's revised the outlook on EDP from stable to positive, while affirming the "Baa3" senior unsecured rating.

Looking at 2022's major debt maturities and early repayments:

- Maturity of €858m bond outstanding, with a coupon of 2.63% (Jan-22).

In 2022, EDP completed the following operations:

- Tariff deficit sale of €562m by EDP SU related with 2021 special regime generation (Jan-22)
- In Mar-22, €1,250m Green Bond issue, with a coupon of 1.875%, yield of 1.897% and a 7.5-year maturity.
- In Feb-22, IE2 Holdco SAU's consent solicitation approval, which resulted in EDP SA replacing IE2 Holdco SAU as the issuer of the €500m (Nov-23) and €550m (Jun-26) bonds.

Total cash and available liquidity facilities amounted to €9.1 Bn by Mar-22, of which €5.4 Bn are fully available credit facilities. This liquidity position allows EDP to cover its refinancing needs beyond 2025, on a business-as-usual environment.

(1) Nominal Value includ. 100% of the hybrid bonds; (2) Derivatives designated for fair-value hedge of debt including accrued interest; (3) After FX-derivatives; (4) Net of regulatory receivables; net debt excluding 50% of hybrid bond issues (including interest); Based on trailing 12 months recurring EBITDA and net debt excluding 50% of hybrid bond issue (including interest); Includes operating leases (IFRS-16)

Installed Capacity as of Mar-22 (EBITDA MW)

Assets' average life and residual life

Renewable capacity accounts for 80% of our total installed capacity and is our current main growth driver (EBITDA + Equity MW). Renewables installed capacity as of Mar-22 totaled 21.7 GW, including 1.7 GW Equity of wind & solar in US, Iberia and APAC, hydro in Brazil and wind offshore in Europe.

In the last 12 months we added +2.8 GW of wind & solar capacity to our portfolio (EBITDA + Equity MW), including (i) in wind onshore Indiana Crossroads Wind Farm (302 MW), Santa Rosa e Mundo Novo I-V in Brazil (155 MW) (ii) in solar Sunseap acquisition in APAC (416 MW, of which 15 MW accounted under equity method), the Pereira Barreto I-V in Brazil (204 MWac) and the Riverstart plant in the US (200 MWac). Also, as part of our asset rotation strategy, since the 1Q21 we completed the sale of (i) a 221 MW wind portfolio located in Portugal; (ii) an 80% equity shareholding in the Riverstart Solar project (200 MWac) located in the US, the remaining position is now accounted under equity method (40 MW) (iii) the Build & Transfer Agreement of EDPR's 302 MW Indiana Crossroads Wind Farm in the US (iv) 80% shareholding position in a portfolio of 405 MW in US, the remaining position is now accounted under equity method (81 MW).

As of Mar-22, our wind & solar capacity under construction totaled 2.4 GW (EBITDA MW). In North America, we have currently 0.7 GW of wind onshore and solar under construction. In Europe, we are building 0.4 GW of wind onshore and solar, mainly in Italy, Poland and Spain. In LatAm, we are building 0.6 GW and 0.5 GW of wind onshore in Brazil and Colombia, respectively.

Our hydro portfolio comprises 5.5 GW in Iberia (45% of which with pumping capacity) and 1.6 GW in Brazil. In LatAm, we additionally own equity stakes on 3 hydro plants totaling 0.5 GW (Jari, Cachoeira-Caldeirão and S. Manoel, all in Brazil) and own an equity stake in a hydro plant under construction in Peru (San Gaban, 78 MW net).

BRL/EUR	5.87	6.60	12%	-0.73

In 1Q22, EBITDA amounted to €405m, (-9% YoY), mainly impacted by:

Wind and solar EBITDA increased to €394m in 1Q22 (+46% YoY), reflecting: (i) recovery of wind resources +5p.p. YoY, to +2% above LT average, namely in North America and Rest of Europe, (ii) higher average MWs installed (+9% YoY), (iii) higher avg. selling price, (iv) exchange rate tailwind, namely USD and BRL (+€10m YoY), (v) and last year's Polar Vortex in February in US, most significantly affecting the Ercot/Texas assets (c.-€35m); which more than offset the negative impact from de-consolidation of assets sold under our asset rotation strategy (€18m EBITDA in 1Q21).

Hydro EBITDA decreased €165m YoY to €12m. In Iberia, EBITDA decreased €171m driven by poor hydro resources in 1Q22 (-70% vs. LT average in Portugal in 1Q22 vs. +28% in 1Q21) coupled with pre-hedged volumes and strong surge in electricity prices. **In Brazil**, EBITDA increased +14% YoY (+€6m) due to the recovery of hydro volumes which had a net positive impact coupled with 12% avg. BRL appreciation (+€5m).

OPEX in renewables was 24% higher, reflecting upfront costs to cope with expanded growth over the coming years. In wind and solar, **Core OPEX per Avg. MW**, adjusted by asset rotations, offshore costs, service fees and forex increased 8%.

Other operating costs (net) decreased €22m mainly driven by: (i) the reversion of the Hydro levy in Spain, relative to the year 2013-14 (€23m), (i) the suspension of generation taxes in Spain and the clawback in Portugal in the context of very high pool prices (+€24m YoY). On the other hand, these effects were partly mitigated by the impact of the extraordinary generation tax in Romania.

Installed Capacity Mar-22 (EBITDA MW)

USA: EBITDA MW by market - Mar-22

In North America, **installed capacity** (6.4 GW EBITDA) is **94% wind and 6% solar PV** (361 MW). Additionally, we own equity stakes in other wind and solar projects, equivalent to 592 MW.

In line with EDP's long term contracted growth strategy, the +1.0 GW additions to portfolio over the last 12 months are PPA-contracted. As of Mar-22, **~90% of total installed capacity is PPA/Hedged contracted.**

Electricity production increased 13% YoY on the back of 12p.p. increase in **average wind resources** to 6% above LT average (P50) and a 2% increase in the **average installed capacity. Average selling price** increased slightly YoY to USD 44/MWh.

Gross profit increased to USD 290m in 1Q22 (+29% YoY), driven by the benefits from the portfolio expansion and hedging strategy and wind resource improvement. Additionally, in 1Q21 a negative impact was booked due to the Polar Vortex event in US (c. USD 40m). **PTC Revenue & Other** increased to USD 66m (+22% YoY), as new PTCs and ITCs contracted more than compensated the impact on PTC revenue arising from the asset rotation sale Jun-21.

EBITDA in North America increased 57% to USD 171m in 1Q22, reflecting the gross profit performance which more than compensated higher costs given the requirements needed to accelerate growth and de-consolidation of assets sold under our asset rotation strategy (USD 11m in 1Q21), including the sale of the 80% shareholding position in a portfolio of 405 MW in the US.

(1) Includes hedging adjustments.

In Europe, wind & solar installed capacity amounts to 5.3 GW EBITDA, mostly wind onshore. As of 1Q22, installed capacity increased 0.5 GW YoY (+10%), mainly due to new installation in Poland, Italy and France (more information on page 10).

Wind & solar output in Europe increased by 5% YoY, to 3.5 TWh, due to higher average capacity installed (+0.3 GW, +7% YoY) and a robust improvement of wind resources in Rest of Europe that were compensated by the weaker wind resources in Iberia. **Average selling price** fell by 28% YoY in Spain due to a weaker wind resource combined with the sharp increase in pool prices. Overall, **wind & solar gross profit** amounted to €293m (+16% YoY).

EBITDA increased 12% YoY to €210m in 1Q22 as the improvement of the operational performance more than compensated for the deconsolidation of wind assets sold in Dec-2021 in Portugal (-€5m), and the extraordinary generation tax in Romania.

Wind & Solar in South America

Our **renewable portfolio** in South America encompasses **795 MW** of consolidated installed capacity, in Brazil, in **wind onshore and solar 591 and 204 MW**, respectively.

Solar installed capacity increased to **204 MW** with the installation of Pereira Barreto Park in 2021. Although the reduction in load factor from 31% to 28%, the increase in wind capacity (+156 MW) and in solar, translated into an energy output of 122% to 496 GWh (vs. 224 GWh in 1Q21). This resulted into an overall increase in Wind and Solar gross profit to R\$102m (+117% YoY).

Overall, EBITDA from Renewables in Brazil improved by 159% in local currency (+R\$ 39m YoY) to **R\$ 64m**.

Wind & Solar in APAC

Following the consolidation of Sunseap in Feb-22, our **renewables portfolio** in the APAC region encompasses **429 MW of solar capacity**. **The main markets** are Vietnam (46% EBITDA MWs) and Singapore (45% EBITDA MWs).

(1) Only considers capacity pre-Sunseap consolidation, as it is the only one to consider the first three months of the year.

Our Electricity Networks segment includes distribution of electricity in Portugal, Spain and Brazil and the activity of transmission in Brazil. Overall, our regulated asset base (RAB) amounts to €6.7 Bn.

Overall, **distributed electricity increased 1% (to 22 TWh)**.

The total number of installed smart meters increased to 5.9m across geographies. Leveraged by the roll out of smart meters, which already have a 71% penetration in EDP's Iberian Electricity Networks, the volume of telemetered energy in Portugal, increased 6% to 79%.

(1) Financial assets as to the transmission business. Regulated Asset Base in Spain updated with provision reversal "Lesividad"; (2) Supplies & services + Personnel costs; (3) Net of subsidies.

Electricity distribution in Portugal

Electricity distributed in Portugal **increased 3% in 1Q22**, justified by the recovery of the small industry and services sector. The quarter was marked by a favourable climate context, absence of extreme weather events, which benefited quality of service.

In 2022 a new regulatory period started and it will last until 2025 YE. Overall, **Regulated revenues amounted to €258m, -2% YoY**. A preliminary rate of return on RAB for the new regulatory period was set at 4.7% and it is indexed to the Portuguese government 10-year bond yields.

OPEX increased 6% YoY on the back of the normalization of activities within a post-pandemic economic recovery context. On the other hand, 1Q21 had been positively impacted by insurance compensations related with previous years' weather events. Additionally, we continued our efforts of improving quality of service and managed to reduce considerably (-38% YoY) the number of complaints from clients. This first quarter, was also marked by the installation of 190k smart meters, having reached a total volume of 4.2m smart meters. The increasing volume of smart meters allows to the digitalization of processes, and in this context remote orders increased 25pp.

Overall, **EBITDA decreased by 11% YoY (-€16m) to €125m** due to higher net operating costs and lower regulated revenues.

Electricity distribution in Spain

During 2021 Viesgo's networks segment was fully integrated within EDP's Spain operations. **Gross profit increased by 6% to €109m in 1Q22**, benefiting from a higher regulated revenue vs. 2021, as it reflects the increase in activity in the Distribution business, mainly driven by an increase in network investments. **OPEX decreased 20% YoY, to €24m in 1Q22**, as a result of ongoing efficiency programs.

The rate of return on RAB, of 5.58%, is in line with last year's, having no impact on **EBITDA**, which grew 27% to **€94m**.

Last year, EDP Spain's RAB was updated following "lesividad" provision reversal, given the Supreme Court order (481/2020) regarding the principle of remuneration of some assets already depreciated but still in operation.

Distributed electricity in Brazil increased +2% YoY in the 1Q22, as a result of the recovery of the economic activity and the expansion in the number of customers connected (+2%).

Gross profit from distribution increased by 37% YoY, at R\$964m, following the positive impact of inflation indexation on annual tariff updates, and on the update in the concessions asset's residual value (+R\$46m). Additionally, lower losses (R\$28m lower than 1Q21) from the sale in wholesale market of the electricity volumes' surplus contracted through PPA but not consumed by our client base (over-contracting) also contributed to the gross profit good performance.

Since the same period last year and following EDP's asset rotation strategy in the Transmission business defined in the business plan 21-25, 3 transmission lines were sold in December-21 and EDP Goiás was added to the portfolio and already contributed with R\$29m to Gross profit. Additionally, during 1Q22 Lot 21 full operation and Lot Q and 18 partial operation also contributed to the total **gross profit from transmission of R\$ 169m**, which corresponds to a 3% increase YoY. All in all, **EBITDA from transmission was in line with 1Q21, R\$ 156m**, -R\$ 1m YoY.

In 1Q22 the Annual Allowed Revenue ("RAP") ascended to R\$ 86m and the correspondent Regulatory EBITDA (RAP excluding adjusted costs and taxes) to R\$ 75m.

Brazilian Networks OPEX was higher than last year (+12% YoY), due to integration of EDP Goiás resulting in higher personnel costs. Moreover, higher costs with supplies and services in both distribution and transmission segments also contributed to the increase. **Other operating costs** also increased and had a negative impact on the **Net Operating Costs** which increased 22% YoY, reflecting inflation's impact across the networks business.

Overall, EBITDA from electricity networks increased by 34% YoY to R\$ 843m, positively impacted by the regulated revenues indexation to inflation and update in the concessions asset's residual value.

• Two distribution concessions, both 100% owned by EDP Brasil: EDP SP, in São Paulo, with 4-year regulatory period last renewed in Oct-19; EDP ES, in Espírito Santo with 3-year regulatory period last time renewed in Aug-19. The regulated WACC is currently defined at 8.09%.

• EDP operates at 100% lot 21, partially two transmission lines (lot Q and 18), acquired recently CELG-T portfolio and is developing two other projects: MGTE acquired in Feb-21 and the awarded Lot 1 from the Auction 1/2021.

Iberian electricity market context

During 3M22, electricity demand in Iberia decreased 2% YoY. Residual thermal demand (RTD), i.e. coal and CCGT generation, increased 134% YoY in 1Q22 (+10.3 TWh YoY), reflecting mainly: (i) +11.2 TWh from weak hydro resources; (ii) +1.8 TWh from decrease in SRP, mainly driven by weaker wind resources in Iberia. This was partially mitigated by -1.6 TWh from lower demand and by -0.9 TWh from higher net imports.

Average electricity spot price highly increased in 1Q22 to ~€229/MWh, a 407% increase YoY. This was supported by a strong increase in commodity prices, namely gas (+362% YoY) and CO2 allowances (+122% YoY). Average electricity final price in Spain increased 357% YoY in 1Q22, to €234/MWh, reflecting the evolution of wholesale spot price.

From an integrated perspective, EBITDA in 1Q22 was negatively impacted by an extraordinary combination of the driest winter (October to March) of the last 90 years (since 1931) in Portugal with the highest wholesale electricity prices ever recorded in a quarter. This represented a 2.6 TWh hydro production shortfall vs. normalized year, where expected production was 100% hedged at prices ~€60/MWh and avg. electricity pool price was at €229/MWh, which resulted in a ~€0.4bn loss. The three main effects were: (i) the shortfall in hydro production was partially compensated by the increase wholesale electricity prices; (ii) lower hydro production led to a short position on generation vs clients, increasing intermediation costs; and (iii) higher unhedged thermal production to compensate the hydro crisis.

Client Solutions & Energy Management segment in Iberia encompasses 4.7 GW of thermal installed capacity, ~5.0m electricity clients and energy trading activities in Iberia. These businesses ensure a responsive and competitive portfolio management, capable of offering clients diversified solutions and enabling the necessary security of supply.

Supply Iberia

The number of electricity clients in Portugal and Spain were very much in line YoY, with the penetration rate of new services per client increasing to 32% in Mar-22 (+3 p.p. YoY), following a 18% and 34% increase in the number of home appliances' maintenance and health insurance contracts YoY, respectively, as EDP maintains its focus on service quality and is leveraging on its customer portfolio to increase the share of wallet. As a result, as of March 2022, EDP has around 1.1 million clients subscribing its services business.

Total electricity supplied in 1Q22 showed a significant 16% YoY growth, on the back an increase in the B2B segment specially in Spain but also in Portugal, partially offset by a slight decrease in electricity supplied in the liberalized B2C segment in Portugal.

Excluding one-off impacts (€21m CIDE gain in 2021), recurring EBITDA at our supply activities in Iberia decrease to -€51m in 1Q22 (vs. €43m in 1Q21) penalized by the seasonal effect of higher sourcing costs from B2C clients in 1Q22 higher than in the rest of the year. This was partially mitigated by the increase in EBITDA from services, namely in decentralized Solar and E-mobility.

EDP keeps growing into new energy solutions involving its clients in the energy transition. In 1Q22, EDP had 59MWac of as-a-service distributed solar in clients' facilities in Iberia (45% higher YoY) and already secured 333MWac of Solar DG capacity (+592% vs. 1Q21) since the Business plan presentation (beginning 2021). On electric mobility, EDP increased by 37% the number of installed electric charging points, reaching 3,280 in 1Q22, with the number of clients with electric mobility solutions increasing 26% YoY.

EM & Thermal - Drivers and Financials	1Q22	1Q21	Δ %	Δ Abs.

Coal (4)	47%	25%	83%	+21p.p.
Nuclear	98%	86%	15%	+13p.p.
Generation Costs (€/MWh) (5)	158	30	418%	+127
EBITDA (€ million)	-55	14	-	-69

Thermal generation & Energy management Iberia

Electricity production in 1Q22 increased 131% YoY, largely explained by the increase in CCGT and in coal output (+159% and +162% YoY, respectively) due to the hydro crisis in Iberia and consequent higher residual thermal demand.

Avg. thermal production cost increased 418% YoY (to €158/MWh in 1Q22), mainly driven by higher CO2 and gas costs.

Energy Management and Thermal EBITDA amounted to -€55m in 1Q22 reflecting the significant increase in sourcing costs to the supply business as a result of the combination between (i) low hydro generation volume that implied a short position in the wholesale electricity market as circa 100% of the expected generation volumes were hedged through fixed prices with customers; and (ii) the highest wholesale energy prices ever recorded in a quarter. Additionally, there was a negative impact (-€84m) mark-to-market impact from gas hedging contracts, in 1Q22, mitigated by (+€43m) higher operational margins related to MtM losses already booked in 2021. This was partially mitigated by the increase in thermal generation (+2.4 TWh YoY).

Our thermal portfolio in Iberia encompasses 4.7 GW installed capacity, which plays an active role in ensuring the security of electricity supply: 59% in CCGT, 37% in coal, 3% in nuclear and 1% of cogeneration and waste.

(1) Only includes Portugal; (2) Cumulative secured capacity during business plan 21-25 (Excludes US and APAC); (3) Includes Nuclear, Cogen. & Waste. (4) Includes only Coal production in Spain; (5) Includes fuel costs, CO2 emission costs and hedging results.

EDP Energy management in Brazil 1Q22
(R\$ Million)

(1) Includes GSF, PLD and MRE

Hydro - Quarterly allocation of physical energy

As part of our risk-controlled approach to its portfolio management, EDP follows a hedging strategy to mitigate the GSF/PLD risk, aiming at reducing the volatility of earnings. Therefore, supply and generation activities (both thermal and hydro) are managed in an integrated way, allowing the optimization of the portfolio as a whole.

Electricity sales increased by 3% YoY, however this mainly refers to low margin activities hardly impacting results. **EBITDA from supply and energy management in Brazil decreased to R\$45m, -R\$17m YoY.**

In addition, as **distributed solar** gains traction in Brazil, EDP Brasil has been expanding in Solar PV through EDP Smart and has a portfolio of 49 MWac installed.

In the 1Q22 Pecém was fully available to operate, however due to the recovery of the reservoirs levels, the national system operator did not request its operation, therefore the power plant did not generate any energy during this first quarter. As this plant is paid on an availability basis, not having generated any energy did not compromise results, in fact Gross Profit increased 15% on the back of the fixed revenue update with inflation (IPCA of 10.67%), in November 2021, having a R\$ 21m positive impact. **As a result, EBITDA from thermal generation increased by 19% YoY in 1Q22 to R\$160m**, in line with the impacts referenced above.

EDP owns equity stakes in hydro plants, representing an **attributable capacity of 551 MW**. These plants are PPA contracted. In the 1Q22 the **electricity output was 2 TWh**, translating a **18% increase YoY** due to the recovery reservoirs. However, due to a lower GSF, as a consequence of our hedging strategy which allocated more energy to the rest of the year, and higher production, EDP was more exposed to PLD which in turn was lower than last year's.

(1) For Group segment reporting purposes, Holdings and other activities at EDP Brazil level are distributed across business segments; (2) Generation Scale Factor (GSF) reflects the total (real) generation, accounted as a proportion of the total volume of Physical Guarantee in the system (when has a strong volatility on quarterly basis); (3) Values of Pecém individual accounts.

Installed capacity by Country as of Mar-22

Breakdown by Technology as of 1Q22

(GW Capacity & TWh of Production)

- Wind & Solar
- Hydro
- Gas
- Coal
- Other

(1) Installed capacity that contributed to the revenues in the period; (2) Includes Poland, Romania, France, Belgium and Italy; (3) Includes Canada and Mexico; (4) Includes Nuclear, Cogeneration and Waste.
