Avoided CO <sub>2</sub> emissions <sup>2</sup>	ktCO <sub>2</sub>	25 841	22 749	23 752	25 167

<sup>1</sup> The total net generation includes steam.

<sup>2</sup> Emissions that would have occurred if the electricity generated by renewable energy sources were produced by thermal power plants. For each country, it is obtained by multiplying the net renewable energy production by the emission factor of the thermoelectric mix of that country.

CLIMATE CHANGE	UN	2023	2022	2021	2020

<sup>1</sup> The stationary emissions do not include those produced by the burning of ArcelorMittal steel gases in EDP's power plant in Spain. Includes only stationary emissions.

<sup>2</sup> Based on global emission factors of each geography.

<sup>3</sup> Based in the suppliers' emission factors.

<sup>4</sup> Calculation methodology of Scope 2 was revised to avoid emissions duplication with scope 1.

<sup>5</sup> Methodological review conducted in 2021.

<sup>1</sup> Aggregated certification indicator due to assets with potential environmental impacts.

<sup>2</sup> Primary energy consumption by turnover.

<sup>3</sup> The stationary emissions do not include those produced by the burning of ArcelorMittal steel gases in EDP's power plants in Spain.

<sup>4</sup> Calculation according with GHG Protocol based location methodology.

<sup>5</sup> Scope 1 and Scope 2 emissions by turnover.

<sup>6</sup> CO2 emissions that would have occurred if the electricity generated by renewable energy sources were produced by thermal power plants. For each country, it is obtained by multiplying the net renewable energy production by the emission factor of the thermoelectric mix of that country.

<sup>7</sup> Includes only stationary combustion emissions.

<sup>8</sup> Other water: > 1,000 mg/L of total dissolved solids

<sup>9</sup> Fresh water: ≤1,000 mg/L of total dissolved solids

<sup>1</sup> Aggregated certification indicator due to assets with potential environmental impacts.

<sup>2</sup> Primary energy consumption by turnover.

<sup>3</sup> The stationary emissions do not include those produced by the burning of ArcelorMittal steel gases in EDP's power plants in Spain.

<sup>4</sup> Calculation according with GHG Protocol based location methodology.

<sup>5</sup> Scope 1 and Scope 2 emissions by turnover.

<sup>6</sup> CO2 emissions that would have occurred if the electricity generated by renewable energy sources were produced by thermal power plants. For each country, it is obtained by multiplying the net renewable energy production by the emission factor of the thermoelectric mix of that country.

<sup>7</sup> Includes only stationary combustion emissions.

<sup>8</sup> Other water: >1,000 mg/L of total dissolved solids

<sup>9</sup> Fresh water: ≤1,000 mg/L of total dissolved solids
