

ESG REPORT 1Q21

Leading on ESG matters at EDP

Key Highlights

We are proud to publish EDP's inaugural Environmental, Social and Governance (ESG) report, a quarterly account entirely dedicated to measuring our performance across a wide range of relevant metrics for the investor community.

At EDP we are long-term advocates of ESG and believe in the value of an integrated sustainability strategy. Enhanced reporting promotes best practices and is key to properly evaluating related risks and opportunities as we work to materialize our strategic goals.

At our Capital Markets Day on the 25th of February 2021 we presented EDP's most ambitious strategic plan to date, which ties ESG excellence to strong financial returns.

We are stepping up to the challenge in the fight against climate change by committing to a €24 Bn investment plan in the energy transition and accelerating our renewables growth by deploying on average 4 GW of new capacity per annum.

Environmental

We have increased our efforts to reduce emissions and decarbonize our portfolio, and now expect to be coal-free by 2025 and all green by 2030, achieving our carbon neutral targets 20 years ahead of the date defined by the Paris Agreement. These action-oriented commitments will enable EDP to lead the energy transition in our core markets and create superior value for all stakeholders.

As we continue to lead the energy transition, we have adopted Group-wide decision making guided by the principles of a circular economy and the enhancement of natural capital. We also expect EDP to play a key role in the post-COVID recovery of the economies we operate in. This includes creating much needed employment, but also ensuring a 'just transition' that creates wider impact across our society and all our stakeholders.

1. Scope 1 and 2

As regulations evolve, namely the development of the EU sustainability reporting standard-setting to comply with the Corporate Sustainability Reporting Directive (CSRD), this performance report will also continue to progress. The indicators included in this report are selected based on their relevance towards investor communities and have been calculated following the Global Reporting Initiative (GRI) Standards. Please visit the full-year EDP Sustainability Report [here](#) for more sustainability information, which includes a limited assurance on compliance with GRI. EDP's Sustainability Report also follows other voluntary regulatory reporting frameworks, namely the Task Force on Climate-related Financial Disclosures (TCFD), the Sustainability Accounting Standards Board (SASB) and the ESG initiative from the Portuguese Securities Market Commission (CMVM). This performance report also considers the consistency with the requirements of the Sustainable Finance Disclosure Regulation (SFDR). For this purpose this report includes some SFDR's indicators.

"At EDP we are passionately committed to deliver this ambition and making a positive impact in this world"

Social

We remain committed to providing a fair and safe workplace, centred on the principles of diversity, equality, and inclusion. We are targeting 35% female employees in our workforce and €100m in Social Investment aligned with Sustainable Development Goals by 2030.

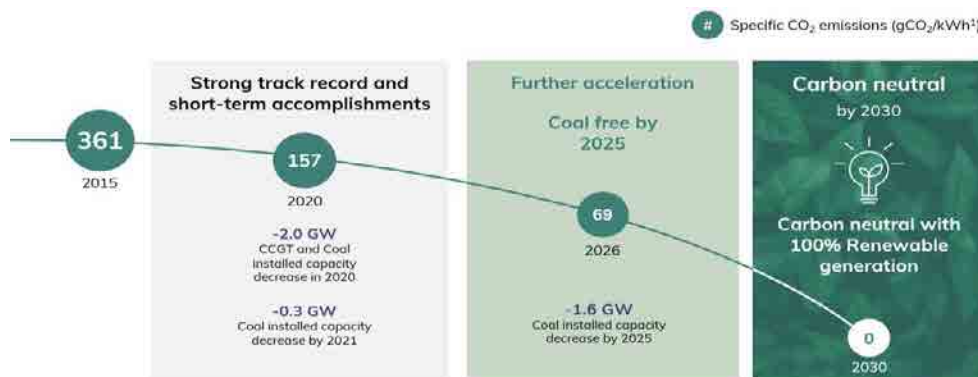

Governance

EDP continues to implement international standards in Corporate Governance, Compliance and Ethics. A number of important milestones have been achieved in April this year such as a reduction in the General Supervisory Board from 21 to 16 members as well as several changes in the Executive Board of Directors Remuneration Policy, reinforcing our commitment to align ourselves with best practice and the most rigorous ESG metrics.

Through EDP's investments and a thorough social responsibility approach, we have continued to contribute to 9 out of the 17 Sustainable Development Goals of the United Nations Agenda for 2030. We have also demonstrated a clear commitment to the 10 principles of the United Nations Global Compact, including human and labor rights and the environment.

Accelerated path towards being carbon neutral

ESG Performance at a Glance

	Indicator	Unit	1Q21	1Q20	Δ %	Target 2025	Target 2030

Renewables represented 85% of electricity generated by EDP in 1Q21, increasing by 6 bps YoY, with this rise being mainly explained by the decrease in gas generation (-65%YoY), due to lower residual thermal demand and the sale of Castejón plants (843MW), and also due to a 5% increase in wind generation.

The weight of coal installed capacity decreased to 8%, following the shut down of Sines coal plant last December. As a result, specific CO₂ emissions continued to decline, as we keep accelerating our decarbonisation path.

Furthermore, on air quality the increase of specific air emissions is related to the increase of production in Pecém (which is a less efficient power plant) in Brazil, due to adverse hydrology in the Northeast of Brazil in this period.

Total waste increased by 25% YoY, mainly explained by the shut down of Sines power plant in Portugal. Regarding this waste, part of it was sold in this 1st quarter (largely by-products).

Accident Frequency rate decreased by -2% as EDP continues determined to constantly strengthen the culture

of Occupational Health and Safety, by developing awareness, deepening willingness and making available the resources to improve health and safety.

Regarding Governance, considering the Board changes implemented at EDP and EDPR level approved in April, the number of non-executive and executive board members decreased by 27% from 45 to 33 members in line with best practices.

○ SFDR indicator

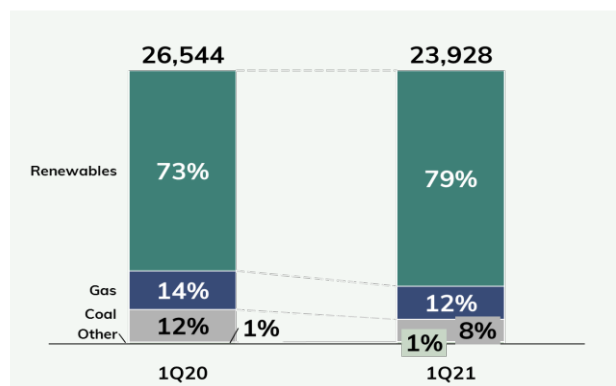

1. Value for 1Q20 is an annual measure; 2. Number of accidents at work with absence/fatalities, per million hours worked (including employees and contractors); 3. 2020 Excludes Viesgo; 4. Applicable to Board of Directors and top management; 5. >= 740; 6. Includes DJSI, FTSE4Good, MSCI and Sustainalytics.

1. Annual Indicators refer to 2020YE; 2. Energy service: Services provided under energy supply, installation of more efficient and/or building retrofit, and sustainable mobility, which generate revenues for the company; 3. Includes public, private and charging points inside EDP facilities; 4. Sustainability Services concept aligned with EU taxonomy. Excludes Health Insurance, Fatura Segura and Gas Certification. Includes only B2C electricity clients; 5. CO₂ avoided by carrying out efficiency improvement measures that lead to a reduction in customer consumption, as well as measures to replace energy sources with other less CO₂-emitting ones, namely replacing fossil fuels with renewable energy sources or sustainable mobility.

Hydrogen has been gaining momentum, driven by ambitious decarbonization targets and policies and increasing competitiveness, and should play a key role in decarbonizing the “hard to abate sectors”, that cannot be easily electrified. The strong commitment to net zero led EDP to create a new unit, the **H2 Business Unit (H2BU)**, that will be the Group's new arm for the development of green hydrogen projects and support the last mile of the decarbonization efforts. This initiative reinforces EDP's commitment in this field and is fully aligned with EU's Hydrogen Strategy which sets the target of 40 GW for electrolysis capacity by 2030.

1. Changes in scope of reporting limits comparability; 2. 1Q20 Conventional Generation (PT & SP); 1Q21 Generation (PT & SP), EDPR & EDP Brasil; 3. Excluding Brazil in 1Q20; 4. Net of disinvestments.

For more information on EDP's sustainability performance please visit our [website](#)

For more information on indicators please visit our [glossary online](#)

1. The comparable peers exclude companies that manage transmission grids, only includes the ones that handle throughout the electricity value chain and electricity/gas supply. S&P ranking is considering the members' companies of DJSI World and Europe; 2. The ESG Risk Rating measures a company's exposure to industry-specific material ESG risks and how well a company is managing those risks (opposed to a score). This rating distinguishes five levels ranging from 100 (Severe) to 0 (Negligible). EDP is considered to have a medium level of risk.
