

We consider that proactive environmental management generates value and constitutes the duty of any socially responsible company.

Our ambition in the international setting in which we operate is to be leaders and a benchmark in environmental management of business and in stakeholder involvement in the promotion and implementation of good practices in this field.

We foster a corporate culture in which the initiatives and activities making up our business are consistent with environmental responsibility and we encourage innovation and continuous improvement in products, services and environmental performance.

As a result, our organizational culture embraces the following values and guidelines:

- Incorporate respect for the environment and management of environmental aspects in all phases of business processes throughout the value chain and ensure that everyone involved, including suppliers, has the necessary, adequate skills for the purpose.
- Base relations with the authorities and other stakeholders on ethical principles of transparency, honesty and integrity.
- Constantly improve environmental performance, especially in the prevention of pollution and minimization of its impacts.
- Comply with the requirements of applicable environmental legislation as well as other, voluntary commitments.
- Manage environmental risks in order to eliminate or minimize the negative impacts of our activities both in normal circumstances and in the event of emergencies, accidents or disasters.
- Manage the impact on biodiversity of our business activities and seek an overall positive balance in this field.
- Foster the use of renewable energy sources and the best technologies in order to preserve natural resources and reduce and prevent pollution.
- Promote energy efficiency and the rational use of energy as one of the main options compatible with the sustainable use of resources.
- Consider stakeholders expectations in environmentally relevant processes and their communication.
- Promote knowledge and the dissemination of good practices in the environmental field.

Approved by the Executive Committee, on January 2011

Thank you for taking care of the environment.

EDPR Environmental Management System in Europe

## What is an EMS?

An Environmental Management System (EMS) is a framework that helps organizations to achieve their environmental goals through consistent control of their operations, with the aim of improving their environmental performance.

## EDPR EMS in Europe

Developed in accordance with the ISO 14001 international standard.

Applicable to operations and maintenance phase of wind farms and solar PV plants.

Certified by an independent certifying organization.

Three main values:

1

Guarantees environmental legal compliance.

2

Focuses the efforts on the relevant environmental aspects of the business.

3

Helps effectively set environmental objectives.

## Documentation of EDPR EMS in Europe

The basic elements of the EDPR EMS in Europe are:

### EDPR Environmental Policy

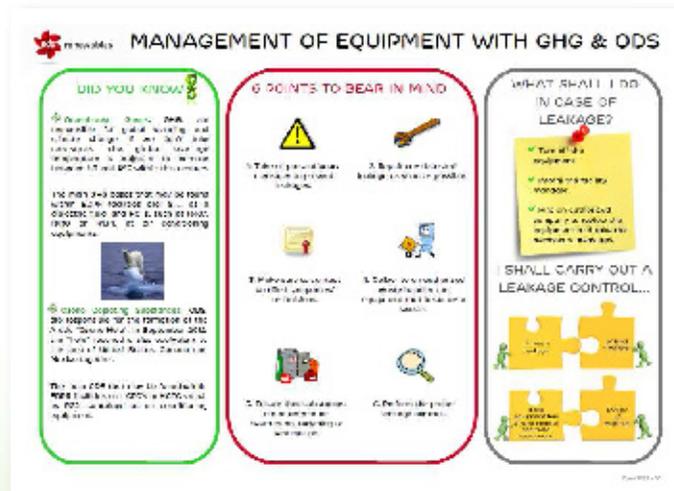

**EMS Manual (MAN):** describes the basic features of the EMS and how it complies with the ISO 14001 standards.

**Executive Procedures (EXPR):** establish general processes to be met in the facilities and activities within the EMS scope.

**Work Instructions (WIT):** describe how employees and contractors will follow the requirements of the EMS in a detailed manner.

**Templates (TMP):** collect and record information in a systematic and standardize manner.

**Guides & Posters (GD):** communicate new and/or relevant environmental topics company-wide.

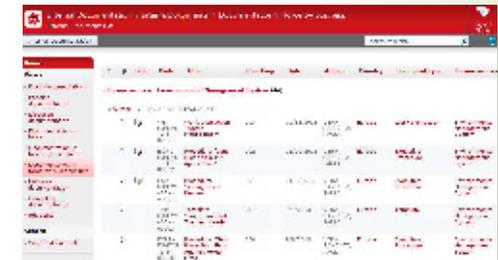

## How do I access the documentation of EDPR EMS in Europe?

You can find the documents of the EDPR EMS in Europe:
